GENERAL INDEX TO VOLUMES XXVI-L

AUTHORS

	VOLUME AND PAGE
ABBOT, C. G. On the temperatures of stars	32, 319
The sun's energy-spectrum and temperature	34, 197
Measurements of solar radiation	37, 130
On DeLury's hypothesis as to effect of haze on measures of solar rotation	45, 65
On the diffusing action of the sun's gases as the cause of the apparently sharp solar boundary	50, 295
Review of: <i>Temperaturbestimmung von 109 helleren Sternen aus spectralphotometrischen Beobachtungen</i> , J. Wilsing and J. Scheiner	31, 274
ABBOT, C. G., and L. B. ALDRICH. The pyrheliometric scale	33, 125
ABBOT, C. G., and F. E. FOWLE, JR. Improvements and new results in solar constant determinations	29, 281
The value of the solar constant of radiation	33, 191
"On the best value of the solar constant"	35, 92
ABBOT, C. G., F. E. FOWLE, and L. B. ALDRICH. On the temper- ature and radiation of the sun	44, 39
The variation of the sun	38, 181
ABETTI, ANTONIO, and GIORGIO. Giovanni Virginio Schiaparelli	32, 313
ABETTI, GIORGIO, and PHILIP FOX. Interaction of sunspots	29, 40
ABETTI, GIORGIO, and ALFRED H. JOY. The orbit of the spectro- scopic binary Boss 2285	50, 391
ABETTI, GIORGIO, and RUTH EMILY SMITH. Photographic observa- tions of prominences	33, 141
ADAMS, WALTER S. The luminosities and parallaxes of five hundred stars. First list. (with Alfred H. Joy)	46, 313
Magnitudes, Some spectral criteria for the determination of absolute stellar. (with Arnold Kohlschütter)	40, 385
Magnitude, The relationship of stellar motions to absolute. (with Gustav Strömberg)	45, 293
Magnitude, Radial velocity and absolute. Comments on Pro- fessor Perrine's article. (with Gustav Strömberg)	47, 189
Parallaxes, The luminosities and, of five hundred stars. (with Alfred H. Joy)	46, 313
Pressure-shift of iron lines, On the. (with Henry G. Gale)	37, 391

ADAMS, WALTER S. (*Continued*)

Pressures, An investigation of the spectra of iron and titanium under moderate. (with Henry G. Gale)	35, 10
Radial velocities of five hundred stars	42, 172
Radial velocities of one hundred stars with measured parallaxes. (with Arnold Kohlschütter) (Errata, 40, 488)	39, 341
Radial velocity, The motions in space of some stars of high. (with Alfred H. Joy)	49, 179
Radial velocity and absolute magnitude. Comments on Professor Perrine's article. (with Gustav Strömberg)	47, 189
Review of: <i>The Solar Rotation in June 1911</i> , J. B. Hubrecht	44, 62
Spectra of some stars having large and small proper motions, Note on the relative intensity at different wave-lengths of the	39, 89
Spectra of Sirius, Procyon, and Arcturus with high dispersion, Some results of a study of	33, 64
Spectra of four of the temporary stars. (with F. G. Pease)	40, 294
Spectral criteria for the determination of absolute stellar magnitudes, Some. (with Arnold Kohlschütter)	40, 385
Spectrum of Nova Geminorum No. 2, Observations of the. (with Arnold Kohlschütter)	36, 293
Spectrum, The flash, without an eclipse. Region λ 4800- λ 6600. (with Cora G. Burwell)	41, 116
Spectrograph of the Mt. Wilson Solar Observatory, The three-prism stellar	35, 163
Spectroscopic binaries, The orbits of three. (with Alfred H. Joy)	49, 186
Spectroscopic binary Boss 46, The orbit of the. (with Gustav Strömberg)	47, 329
Stellar motions, The relationship of, to absolute magnitude. (with Gustav Strömberg)	45, 293
Sun, Spectroscopic investigations of the rotation of, during the year 1908	29, 110
Sun, Preliminary note on the rotation of the, as determined from the displacements of hydrogen lines	27, 213
Sun, Spectrographic observations of the rotation of the	26, 203
Sun. The flash spectrum without an eclipse. Region λ 4800- λ 6600. (with Cora G. Burwell)	41, 116
Sun. "Flash" spectrum without an eclipse, Photography of the. (with George E. Hale)	30, 222
Sun's limb, displacements of the spectrum lines at the, An investigation of the	31, 30
Sun-spots, Preliminary catalogue of lines affected in. Region λ 4000 to λ 4500	27, 45

ADAMS, WALTER S. (*Continued*)

- Sun-spot spectra, A summary of the results of a study of the
Mt. Wilson photographs of 30, 86
- Variable SU Cassiopeiae, Note on the Cepheid. (with Harlow
Shapley) 47, 46
- ALBRECHT, SEBASTIAN. On systematic errors of stellar radial
velocities 40, 473
- On a quantitative method for determining the spectral types
of the brighter stars 33, 130
- On progressive changes of the wave-lengths of lines in stellar
spectra with change of type 50, 277
- Anomalous dispersion in the sun 41, 333; 44, 1
- ALBRECHT, SEBASTIAN, and W. W. CAMPBELL. The spectrum of
comet c 1908 (Morehouse) 29, 84
- ALDRICH, L. B., and C. G. ABBOT. The pyrheliometric scale . . . 33, 125
- ALDRICH, L. B., C. G. ABBOT, and F. E. FOWLE. The variation of
the sun 38, 181
- On the temperature and radiation of the sun 44, 39
- ALTER, DINSMORE, and F. E. KESTER. Spectral series and the
grouping of the asteroids 50, 50
- AMES, JOSEPH S. Review of: *An introduction to the theory of
optics*, Arthur Schuster 34, 410
- AMES, J. S., H. KAYSER, and Ch. Fabry. Secondary standards of
wave-length, international system, in the arc spectrum of
iron 32, 215
- Additional secondary standards, international system, in the
arc spectrum of iron 33, 85
- AMES, J. S., H. BUISSON, F. PASCHEN, and H. Kayser. Secondary
standards of wave-length, international system, in the arc
spectrum of iron, adopted by the Solar Union, 1913 . . . 39, 93
- ANDERSEN, E. BUCH. A probable parallax of the North America
nebula 38, 275
- ANDERSON, JOHN AUGUSTUS. Absorption and emission spectra of
neodymium and erbium compounds 26, 73
- On the application of the laws of refraction in interpreting
solar phenomena 31, 166
- Glass and metallic replicas of gratings 31, 171
- A method of investigating the Stark effect for metals, with
results for chromium 46, 104
- ANDERSON, J. A., and C. M. SPARROW. On the effect of the groove
form on the distribution of light by a grating 33, 338
- ÅNGSTRÖM, ANDERS. Nils Christofer Dunér 41, 81
- Ångström compensation-pyrheliometer and the pyrheliometric
scale 40, 274

ÅNGSTRÖM, ANDERS (*Continued*)

Studies of the nocturnal radiation to space	37, 305; 39, 95
Note on the transmission of the atmosphere for earth radiation	38, 198
ÅNGSTRÖM, A. K., and E. H. KENNARD. Some pyrheliometric observations on Mount Whitney	39, 350
ANTONOFF, G. N., and E. J. EVANS. The absorption spectrum of selenium vapor and the effect of temperature upon it	34, 277
ARCICHOVSKIJ, V. On Slipher's spectrograms of the major planets	38, 504
ARONBERG, LESTER. Note on the spectrum of the isotopes of lead	47, 96
The structure of the bismuth line λ 4722	47, 102
AVERY, ALFRED H., and NORTON A. KENT. Wave-lengths of titanium $\lambda\lambda$ 3900 and 3913 in arc and spark	27, 70
BABCOCK, HAROLD D. The Zeeman effect for chromium	33, 217
The Zeeman effect for vanadium	34, 209
Note on the grouping of triplet separations produced by a magnetic field	34, 288
Note on the polarization of the night sky	50, 228
BABCOCK, HAROLD D., and CHARLES E. ST. JOHN. A study of the pole-effect in the iron arc	42, 231
The elimination of pole-effect from the source for secondary standards of wave-length	46, 138
BACKHOUSE, T. W. The auroral spectrum	50, 231
BAILEY, SOLON I. Edward Charles Pickering, 1846-1919	50, 233
BAILLAUD, B. Regarding the <i>Bulletin Astronomique</i>	50, 76
BALDET, F. and A. DE LA BAUME PLUVINEL. Spectrum of comet Morehouse (1908 c)	34, 89
BALY, E. C. C. A theory of absorption, fluorescence and phosphorescence	42, 4
BANERJI, SUDHANSUKUMAR. On some phenomena observed in the Foucault test. (Errata, 50, 311)	48, 50
BARKER, E. F., and H. M. RANDALL. The infra-red arc spectrum of iron	49, 42
The infra-red arc spectra of cobalt, nickel, manganese, and chromium	49, 54
BARNARD, E. E. Observations of the Aurora, made at the Yerkes Observatory, 1902-1909	31, 208
Comet c 1908 (Morehouse)	28, 292
Photographic observations of comet c 1908 (Morehouse). Second paper	28, 384
Photographic observations of comet c 1908 (Morehouse). Third paper	29, 65
Visual observations of Halley's comet in 1910. (Errata, 40, 488)	39, 373

BARNARD, E. E. (*Continued*)

Note on the southern tail of Halley's comet seen May 17 and 18, 1910	46, 83
Photographic observations of comet 1911 c (Brooks)	36, 1
On the colors of some of the stars in the globular cluster M ₁₃ (Hercules)	29, 72
Photographic determination of the colors of some of the stars in the cluster M ₁₃ (Hercules)	40, 173
Dark regions in the sky suggesting an obscuration of light .	38, 496
Some of the dark markings on the sky and what they suggest	43, 1
On the dark markings of the sky. With a catalogue of 182 such objects	49, 1
A correction to the paper "On the dark markings of the sky"	49, 360
On a great nebulous region and on the question of absorbing matter in space and the transparency of the nebulae .	31, 8
A great nebulous region near Omicron Persei	41, 253
Some peculiarities of Nova Aquilae III of 1918	49, 199
Review of: <i>The story of the comets</i> , George F. Chambers .	31, 92
Review of: <i>Die Milchstrasse</i> . Max Wolf	29, 89
Review of: <i>Stereoskopbilder vom Sternhimmel</i> , 2. Serie, Max Wolf	44, 131
Observations of Saturn's rings at their disappearances in 1907 with a suggested explanation of the phenomena presented	27, 35
Additional notes on the visibility of the dark side of Saturn's rings	27, 234
Photographic measures of Saturn and its rings	40, 259
BARNES, JAMES. On the spectrum of calcium	27, 152
The new lines in the spectrum of calcium	30, 14
Note on the calcium bands at λ 6382 and λ 6389	31, 175
An inclosed arc for spectroscopic work	34, 154
The spectra of aluminium, copper, and magnesium in the arc under reduced pressure	34, 159
The spectra of magnesium, calcium, and sodium vapors .	39, 370
BARRETT, STORRS B. Variable radial velocities of two stars in the Taurus stream	32, 183
Review of: <i>Tables du Bulletin de la Société belge d'astronomie</i> (1895-1909), Auguste Collard	32, 326
Review of: <i>Lines in the arc spectra of elements</i> , F. Stanley .	35, 354
BATEMAN, HARRY. Review of: <i>A meteorological treatise on the circulation and radiation in the atmospheres of the earth and of the sun</i> , Frank H. Bigelow	44, 342
Review of: <i>A treatise on the sun's radiation and other solar phenomena</i> , Frank H. Bigelow	49, 355
BAUME PLUVINEL, A. DE LA. Jules César Janssen	28, 89

	VOLUME AND PAGE
BAXANDALL, F. E. On changes of the wave-lengths of lines in stellar spectra with change of type	48, 59
BECKER, A. E. An experimental study of a theory of the complex Zeeman effect	44, 236
BELL, Louis. Some convenient forms of comparison-prisms	29, 305
Star colors. A study in physiological optics	31, 234
The physical interpretation of albedo. Saturn's rings	45, 1; 50, 1
BILHAM, E. G. On the wave-lengths of iron arc lines in the neighborhood of the calcium H and K lines	42, 469
BIRGE, RAYMOND T. Formulae for the spectral series for the alkali metals and helium.	32, 112
The first Deslandres' group of the positive band spectrum of nitrogen, under high dispersion	39, 50
Notes on the use of the concave grating	43, 81
The mathematical structure of band series	46, 85
The dispersion of air and the reduction of wave-lengths to vacuum	50, 72
BISCOE (BISKE), FELIX. On the temperature and radiation of the sun	43, 197; 46, 355
BISKE (BISCOE), FELIX. Are diffraction phenomena possible at solar eclipses?	38, 192
BLACKWELDER, E. Review of: <i>The earth, its life and death</i> , A. Berget	41, 330
BLAIR, WILLIAM R. Review of: <i>The structure of the atmosphere in clear weather</i> . C. J. P. Cave	37, 298
BLAJKO, S. On the spectra of two meteors.	26, 341
BOHLIN, KARL. The January comet, 1910 a	33, 185
BORTON, MARTHA C., HENRY NORRIS RUSSELL, and MARY FOWLER. Comparison of visual and photographic observations of eclipsing variables	45, 306
BOSS, BENJAMIN. Review of: <i>Der Bau des Fixsternsystems</i> , Hermann Kobold	31, 90
BOURGET, H., H. BUISSON, and CH. FABRY. An application of interference to the study of the Orion nebula	40, 241
BROOKS, E. E. The magnesium spectrum under reduced pressure	29, 177
BROWN, ERNEST W. Review of: <i>An introductory treatise on dynamical astronomy</i> , H. C. Plummer	50, 78
BROWN, F. C., and JOEL STEBBINS. A determination of the moon's light with a selenium photometer	26, 326
BUCHANAN, H. E. Review of: <i>The moon in modern astronomy</i> . Philip Fauth	29, 91
BUISSON, HENRI. The minimum radiation visually perceptible	46, 296

BUISSON, H., ET CH. FABRY. Application de la méthode interférentielle à la mesure de très petits déplacements de raies. Comparaison du spectre solaire avec le spectre d'arc du fer. Comparaison du centre et du bord du soleil	31, 97
Wave-length measurements for the establishment of a system of spectroscopic standards.	28, 169
Application of the interference method to the study of nebulae	33, 406
BUISSON, H., CH. FABRY, and H. BOURGET. An application of interference to the study of the Orion nebula	40, 241
BUISSON, H., H. KAYSER, J. S. AMES, and F. PASCHEN. Secondary standards of wave-length, international system, in the arc spectrum of iron adopted by the Solar Union, 1913	39, 93
BURWELL, CORA G., and WALTER S. ADAMS. The flash spectrum without an eclipse. Region λ 4800- λ 6600	41, 116
CADY, F. E., W. E. FORSYTHE, and EDWARD P. HYDE. The effective wave-length of transmission of red pyrometer glasses and other notes on pyrometry	42, 294
The visibility of radiation	48, 65
CAJORI, FLORIAN. Review of: <i>Die Mathematik im Altertum und im Mittelalter</i> . H. G. Zeuthen	38, 207
CAMPBELL, W. W. Eleven stars having variable radial velocities	29, 224
The spectrum of comet <i>d</i> 1907 (Daniel)	28, 229
CAMPBELL, W. W., and Sebastian Albrecht. The spectrum of comet <i>c</i> 1908 (Morehouse)	29, 84
CAMPBELL, W. W., and J. H. MOORE. Eight stars whose radial velocities vary	26, 292
CANNON, ANNIE J. Williamina Paton Fleming	34, 314
CANNON, J. B. Orbit of the spectroscopic binary 32 θ_2 Cygni	47, 193
CARTER, EDNA, and ARTHUR S. KING. Preliminary observations of the spectra of calcium and iron when produced by cathodo-luminescence	44, 303
A further study of metallic spectra produced in high vacua	49, 224
CHAMBERLIN, R. T. Review of: <i>Conférences sur quelques thèmes choisis de la chimie physique, pure et appliquée</i> . Svante Arrhenius	38, 204
Review of: <i>The atmosphere</i> . A. J. Berry	39, 184
Review of: <i>The work of rain and rivers</i> . T. G. Bonney	37, 303
Review of: <i>Rocks and their origins</i> . Grenville A. J. Cole	37, 303
CHEVALIER, STANISLAS. Contribution to the study of the photosphere	27, 12
The solar rotation from the motion of the faculae on the disk	32, 388
CLARK, HERBERT A. The selective reflection of salts of chromium and certain other oxygen acids.	35, 48

	VOLUME AND PAGE
CLARK, JOHN S. Wave-lengths of the chief lines of nitrogen and oxygen in the region λ 3880 to λ 4700	40, 332
CLO, J. HARRY. The effect of temperature on the ionization of a gas	33, 115
COMSTOCK, D. F. A simple criterion for the detection of anomalies in the orbits of spectroscopic binaries	31, 364
COMSTOCK, GEORGE C. The absorption of star light considered with relation to the galaxy	31, 270
Review of: <i>A treatise on spherical astronomy</i> , Sir Robert Ball .	31, 91
COOPER, FRANK LAWRENCE. Measurements of wave-lengths of the spark spectra of chromium and calcium; also of the arc spectra of cerium and thorium; together with a study of the possible influence of variations of current, capacity, etc., in the spark circuit. (Errata, 30, 400)	29, 329
The absorption spectra of certain salts in aqueous and non-aqueous solutions	31, 339
The absorption in the red of the acetate, nitrate, and sulphate of cobalt.	32, 309
CORTIE, A. L. The variability in light of Mira Ceti and the temperature of sun-spots	26, 123
On the possible existence of steam in the regions of sun-spots	28, 379
COTTON, A. On Doppler's principle, in connection with the study of the radial velocities on the sun	33, 375
On the measurement of the Zeeman effect	35, 213
CREW, HENRY. George Washington Hough	30, 68
Review of: <i>The constitution of matter</i> . Joseph S. Ames .	40, 239
Review: <i>Handbuch der Spectroscopie</i> , Band V. H. Kayser .	33, 87
Review of: <i>Handbuch der Spectroscopie</i> , Band VI. H. Kayser	38, 126
Review of: <i>Mathematical and physical papers of Lord Kelvin</i> , Sir Joseph Larmor	34, 320
Review of: <i>Collected papers on spectroscopy</i> , G. D. Liveing and Sir J. Dewar.	46, 238
Review of: <i>Recherches théorétiques et expérimentales sur la constitution des spectres ultraviolets d'étincelles oscilantes</i> , Eugène Néculea.	30, 74
Review of: <i>Sir George Gabriel Stokes: Memoir and scientific correspondence</i> . Selected and arranged by Joseph Larmor	28, 407
CREW, HENRY, and GEORGE V. McCauley. Wave-lengths in the spectrum of the calcium arc in vacuo	39, 29
CRUMP, C. C. Review of: <i>A voyage in space</i> , H. H. Turner .	44, 135
CURTIS, HEBER D. Temperature control for silvered specula .	26, 256
Five stars having variable radial velocities	29, 229
Orbit of the spectroscopic binary α Carinae	26, 268

CURTIS, HEBER D. (<i>Continued</i>)	
Orbit of the spectroscopic binary θ Draconis	26, 263
Orbit of the spectroscopic binary α Pavonis	26, 274
Orbit of the spectroscopic binary κ Velorum	26, 271
CURTISS, R. H. On the orbital elements of Algol	28, 150
Preliminary statement of the early observations of Nova Geminorum No. 2, made at the Observatory of the Uni- versity of Michigan	35, 233
DANIEL, ZACCHEUS, and HENRY NORRIS RUSSELL. Venus as a luminous ring	26, 69
DAWSON, BERNHARD H. The period of α Tucanae (Errata, 50, 311)	48, 310
DELURY, RALPH E. A new form of spectro-comparator	46, 219
The effect of haze on spectroscopic measures of the solar rotation	44, 177
Note on a supposed variation in the solar rotation	44, 198
Desirability of observations of the solar rotation at the times of eclipse	47, 199
The nature of a supposed variation in the solar rotation in 1915	48, 195
DELURY, RALPH E., and J. S. PLASKETT. The solar rotation in 1911	37, 73
DERSHEM, ELMER, and JOEL STEBBINS. Photo-electric measures of the light of Nova Aquilae No. 3	49, 344
DICKEY, ROBERT WILLIAM. The application of the plane grating to the determination of the index of refraction of a gas, with values for air from λ 2500 to λ 6500	45, 189
DOUGLASS, A. E., A photographic periodogram of the sun-spot numbers	40, 326
An optical periodograph	41, 173
DUFFIELD, W. GEOFFREY. The effect of pressure upon arc spectra. No. I.—Iron	26, 375
Spectrum near the poles of an iron arc	27, 260
DUFFIELD, W. GEOFFREY, and R. ROSSI. The emission spectrum of silver heated in a carbon-tube furnace in air	28, 371
DUGAN, RAYMOND S. A photometric study of the eclipsing variable RV Ophiuchi	43, 130
A photometric study of the eclipsing variable RZ Cassiopeiae	44, 117
DUSHMAN, SAUL, HERBERT E. IVES, and E. KARRER. Factors affecting the relation between photo-electric current and illumination	43, 9
EAGLE, ALBERT. On a new mounting for a concave grating	31, 120
On the spectra of some of the compounds of alkaline earths	30, 231

	VOLUME AND PAGE
EAGLE, A., and A. FOWLER. The reproduction of prismatic spectrum photographs on a uniform scale of wave-lengths	28, 284
EARHART, R. F., and C. B. JOLLIFFE. Effect of a longitudinal magnetic field upon glow-discharge	46, 76
EASTON, C. A photographic chart of the milky way and the spiral theory of the galactic system	37, 105
EBERHARD, G., and K. SCHWARZSCHILD. On the reversal of the calcium lines H and K in stellar spectra.	38, 292
EDDINGTON, A. S. On the conditions in the interior of a star	48, 205
EICHELBERGER, W. S. Letter to Editor. The astronomical day	46, 366
ELLERMAN, FERDINAND. Solar hydrogen "bombs"	46, 298
ELLERMAN, F., G. E. HALE, F. H. SEARES, and A. VAN MAANEN. The general magnetic field of the sun. Apparent variation of field-strength with level in the solar atmosphere	47, 206
ELLERMAN, FERDINAND, GEORGE E. HALE, S. B. NICHOLSON, and A. H. JOY. The magnetic polarity of sun-spots. (Errata, 50, 77)	49, 153
EVANS, E. J. The arc spectrum of iron λ 6855 to λ 7412	29, 157
The arc spectrum of titanium from λ 5866 to λ 7364	29, 160
The absorption spectrum of iodine vapor at high temperatures	32, 1
The absorption spectrum of bromine at high temperatures	32, 291
The absorption spectrum of tellurium vapor and the effect of high temperature upon it	36, 228
EVANS, E. J., and G. N. ANTONOFF. The absorption spectrum of selenium vapor and the effect of temperature upon it	34, 277
EVERSHED, J. A large prominence	28, 79
Note on the wave-length of H δ and H ϵ in the solar spectrum	28, 162
On the angular speed of rotation of a long-enduring prominence	33, 1
Note on radial movement in sun-spots.	40, 156
EVERSHEIM, PAUL. Determination of wave-lengths of light for the establishment of a standard system	26, 172
Measurements of wave-lengths of standard iron lines	31, 76
FABRY, CHARLES. On the size of meteors. (Errata, 30, 400)	30, 318
Remarks on the temperature of space	45, 269
The intrinsic brightness of the starlit sky	31, 394
The general illumination of the sky	50, 308
FABRY, C., and H. BUISSON. Wave-length measurements for the establishment of a system of spectroscopic standards	28, 169
Application de la méthode interférentielle à la mesure de très petits déplacements de raies. Comparaison du spectre solaire avec le spectre d'arc du fer. Comparaison du centre et du bord du soleil	31, 97
Application of the interference method to the study of nebulae	33, 406

FABRY, CH., H. BUISSON, and H. BOURGET. An application of interference to the study of the Orion nebula	40, 241
FABRY, CH., H. KAYSER, and J. S. AMES. Secondary standards of wave-length. international system, in the arc spectrum of iron	32, 215
Additional secondary standards, international system, in the arc spectrum of iron	33, 85
FATH, E. A. On the spectrum of the Andromeda nebula	30, 167
The spectra of spiral nebulae and globular star clusters	33, 58; 37, 198
The integrated spectrum of the milky way	36, 362
FÉNYI, J. The large prominence of May 21, 1907	27, 78
FÉRY, CH. A prism with curved faces, for spectrograph or spectro-scope	34, 79
FORSYTHE, WILLIAM E. A determination of the melting points of tantalum and tungsten	34, 353

SEARES, FREDERICK H. (*Continued*)

Photographic and photo-visual magnitudes of stars near the north pole	41, 206
A comparison of the Harvard and Mount Wilson scales of photographic magnitude	41, 259
A determination of the galactic condensation from certain zones of the <i>Astrographic Catalogue</i>	46, 117
The spiral of obscuration. Comments on Professor Turner's reply	46, 232
The displacement-curve of the sun's general magnetic field	38, 99
The general magnetic field of the sun. Apparent variation of field-strength with level in solar atmosphere. (with George E. Hale and others)	47, 206

SEARLE, G. F. C. On the measurement of the Zeeman effect 37, 282

SHAPLEY, HARLOW. Studies based on the colors and magnitudes in stellar clusters

1. The general problem of clusters (in abstract)	45, 118
2. Thirteen hundred stars in the Hercules cluster (Messier 13)	45, 123
3. A catalogue of 311 stars in Messier 67. [Abstract]	45, 140
4. The galactic cluster Messier 11	45, 164
5. Color-indices of stars in the galactic clouds	46, 64
6. On the determination of the distances of globular clusters	48, 89
7. The distances, distribution in space, and dimensions of 69 globular clusters	48, 154
8. The luminosities and distances of 139 Cepheid variables	48, 279
9. Three notes on Cepheid variation	49, 24
10. A critical magnitude in the sequence of stellar luminosities.	49, 96
11. A comparison of the distances of various celestial objects	49, 249
12. Remarks on the arrangement of the sidereal universe	49, 311
13. The galactic planes in 41 globular clusters. (with Martha Betz Shapley)	50, 42
14. Further remarks on the structure of the galactic system. (with Martha Betz Shapley)	50, 107
On darkening at the limb in eclipsing variables. (with Henry Norris Russell)	36, 239, 385
Elements of the eclipsing variables W Delphini, S Cancri, SW Cygni, and U Cephei	36, 269
The visual and photographic ranges and the provisional orbits of Y Piscium and RR Draconis	37, 154
The orbits of eighty-seven eclipsing binaries—a summary	38, 158

SHAPLEY, HARLOW (*Continued*)

- Elements of the eclipsing variable stars Z Draconis and RT Persei. (with Henry Norris Russell) 39, 405
- Intermediate degrees of darkening at the limb of stellar disks with an application to the orbit of Algol 40, 219
- The spectroscopic orbit of RX Herculis determined from three plates with a new photometric orbit and absolute dimensions 40, 399
- On the distribution of eclipsing variable stars in space. (with Henry Norris Russell) 40, 417
- Notes on the color-curve and light-elements of W Ursae Majoris. (with J. Van der Bilt) 46, 281
- On the nature and cause of Cepheid variation 40, 448
- A study of the light-curve of XX Cygni. (with Martha Betz Shapley) 42, 148
- On the changes in spectrum, period, and light-curve of the Cepheid variable RR Lyrae 43, 217
- The variations in spectral type of twenty Cepheid variables 44, 273
- Note on the Cepheid variable SU Cassiopeiae. (with Walter S. Adams) 47, 46
- New variables in the center of Messier 3 40, 443
- The variation in light and color of RS Boötis. (with Frederick H. Seares) 48, 214
- Miscellaneous notes on variable stars 41, 291
- Note on the densities of the second-type stars 42, 271
- On the distribution of stars in twelve globular clusters. (with Francis G. Pease) 45, 225
- Review of: *Polhöhen-Schwankungen*, E. Przybyllok 41, 328

nebulæ **40**, 466

ZEEMAN, P., and B. WINAVER. The magnetic separation of
absorption lines in connection with sun-spot spectra . . . **32**, 329

INDEX OF SUBJECTS

	VOLUME AND PAGE
ABSORBING matter in space and transparency of nebulae. <i>E. E. Barnard</i>	31, 8
ABSORPTION band, Modification in appearance and position of, resulting from presence of foreign gas. <i>R. W. Wood</i>	26, 41
of neodymium and erbium compounds. <i>J. A. Anderson</i>	26, 73
of some gases for light of very short wave-length. <i>Theodore Lyman</i>	27, 87
of light in space. <i>J. C. Kapteyn</i> . (Errata, 30, 398)	29, 46; 30, 284
of light in space. Photographic color-filters <i>J. A. Parkhurst</i>	30, 33
spectra of certain rare earths, Effect of a magnetic field upon. <i>William Frederick Schulz</i>	30, 383
and radiation. <i>W. J. Humphreys</i>	31, 281
in the red of the acetate, nitrate, and sulphate of cobalt. <i>Frank L. Cooper</i>	32, 309
Selective, of light on moon's surface and lunar petrography. <i>R. W. Wood</i>	36, 75
spectra of some alkaloids, Infra-red. <i>B. J. Spence</i>	39, 243
fluorescence and phosphorescence. <i>E. C. C. Baly</i>	42, 4
Selective, in ultra-violet region. <i>E. O. Hulburt</i>	46, 1
of near infra-red radiation by water-vapor. <i>W. W. Sleator</i> . (Errata, 48, 204)	48, 125
of some diatomic gases, near infra-red. <i>Elmer S. Imes</i>	50, 251
spectrum of carbon disulphide vapor. <i>Irene M. Pauly</i>	50, 155
ACHROMATISM in a symmetrical photographic doublet. <i>H. C. Lord</i>	38, 297
ACTINOMETRY, Yerkes. <i>J. A. Parkhurst</i>	36, 169
ADDENDA to van Maanen's list of proper motion stars	43, 248
AERIAL photometry. <i>M. Luckiesh</i>	49, 108
AIR, Dispersion of, and reduction of wave-lengths to vacuum. <i>Raymond T. Birge</i>	50, 72
dry, Radiation exponent of. <i>W. J. Humphreys</i>	30, 20
Spectra of low potential discharges in. <i>Gordon S. Fulcher</i>	37, 60
Index of refraction of, for wave-lengths from 2218A to 9000A. <i>W. F. Meggers and C. G. Peters</i>	50, 56
ALBEDO of planets and their satellites. <i>Henry Norris Russell</i>	43, 173
Physical interpretation of. <i>Louis Bell</i>	45, 1; 50, 1
ALGOL, Darkening at limb of stellar disks with application to orbit of. <i>Harlow Shapley</i>	40, 219
Measurement of light of stars with selenium photometer, with application to variations of. <i>Joel Stebbins</i>	32, 185

ALGOL (<i>Continued</i>)	
Orbital elements of. <i>R. H. Curtiss</i>	28, 150
Radiation of companion of. <i>Joel Stebbins</i>	33, 395
ALKALI earths in Schumann region, Spark spectra of. <i>Theodore Lyman</i>	35, 341
metal spectra. Series in. <i>F. A. Saunders</i>	28, 71
metals and helium, Formulae for spectral series for. <i>R. T. Birge</i>	32, 112
metals, Reflecting power of. <i>J. B. Nathanson</i>	44, 137
Spectra of alkalis. <i>Carl Runge</i>	27, 158
and alkaline earth metals, <i>Grundspectra</i> of. <i>Edgar H. Nelthorpe</i>	41, 16
ALKALINE earths, Spectra compounds of. <i>Albert Eagle</i>	30, 231
earth sulphides, Temperature and phosphorescence in. <i>Herbert E. Ives</i> and <i>M. Luckiesh</i>	36, 330
ALKALOIDS, Infra-red absorption spectra of. <i>B. J. Spence</i>	39, 243
ALUMINIUM, Spectrum of. <i>A. B. Manning</i>	37, 288
Band spectra of. <i>Emily E. Howson</i>	36, 286
in arc under reduced pressure, Spectra of. <i>James Barnes</i>	34, 159
AMMONIA, Ultra-violet band of. <i>E. P. Lewis</i>	40, 154
ANALYZER, harmonic, Determination of periodicities by, with an application to sun-spot cycle. <i>A. A. Michelson</i>	38, 268
ANASTIGMATISM in a symmetrical photographic doublet. <i>H. C. Lord</i>	38, 297
ANDROMEDA nebula, Spectrum of. <i>J. Scheiner</i>	30, 69
<i>E. A. Fath</i>	30, 167
TW ANDROMEDAE, Elements of. <i>John Q. Stewart</i>	42, 315
ÅNGSTRÖM compensation-pyrheliometer and pyrhelimetric scale. <i>A. K. Ångström</i>	40, 274
ANODE and cathode arc-spectra, Difference between. <i>W. J. Humphreys</i>	27, 200
ANOMALOUS DISPERSION of metallic vapors, Study with electric furnace of. <i>Arthur S. King</i>	45, 254
Mutual repulsion of spectral lines, and other solar effects concerned with. <i>Sir Joseph Larmor</i>	44, 265
in sun in light of observations. <i>Charles E. St. John</i>	41, 28
in the sun. <i>Sebastian Albrecht</i>	41, 333
Fraunhofer lines—reply to objections. <i>W. H. Julius</i>	43, 43
Fraunhofer lines are not systematically affected by. <i>Charles E. St. John</i>	44, 311
ANOMALOUS refraction phenomena investigated with spectrohelio-graph. <i>W. H. Julius</i>	28, 360
APEX, Dependence of solar, upon proper motion and cause of different positions of apex yielded by radial velocities and proper motions. <i>C. D. Perrine</i> (Errata, 44, 263) 43, 286; 44, 103; 45, 103	

	VOLUME AND PAGE
AQUEOUS VAPOR above Mount Wilson, Determination of. <i>F. E. Fowle</i>	37, 359
Transparency of. <i>F. E. Fowle</i>	42, 394
AQUILAE, NOVA, NO. 3. Suggestions to observers of. <i>C. D. Perrine</i>	48, 61
Change in brightness, spectrum and temperature of. Mentore Maggini. (Errata, 50, 311)	48, 303

To volumes XXVI–L	50, 77, 312
Notice of increase in subscription price	29, 328
ATMOSPHERE, Vertical temperature-gradients of. <i>W. J. Humphreys</i>	29, 14

ATMOSPHERIC TRANSMISSION by night and by day. <i>Frank W. Very</i>	29, 325
of solar radiation, Accuracy in measurements of. <i>Frank W. Very</i>	37, 31
Earth radiation. <i>Anders Ångström</i>	38, 198
ATMOSPHERIC transparency, Avogadro's constant and. <i>F. E. Fowle</i>	40, 435
ATOM, The astronomical, and the spectral series of hydrogen.	
<i>Fernando Sanford</i> . (Errata, 48, 204)	48, 1
ATOMIC structure, and Stark effect. <i>Gordon S. Fulcher</i>	41, 359
numbers of elements, Spectra and. <i>J. E. Paulson</i>	49, 276
ATOMS, Convergence wave-lengths in series and radii of their respective. <i>Fernando Sanford</i>	44, 201
β AURIGAE, New bright variable star, <i>Joel Stebbins</i> . (Errata, 34, 415)	34, 112
AURORA, Observations during 1902-1909. <i>E. E. Barnard</i>	31, 208
Altitude of. <i>Carl Störmer</i>	43, 243
Expedition to Bossekop in spring of 1913. <i>Carl Störmer</i>	38, 311
Photographs of. <i>Carl Störmer</i>	45, 67
Line, General auroral illumination of sky and wave-length of chief. <i>V. M. Slipher</i>	49, 266
Spectrum of. <i>T. W. Backhouse</i>	50, 231
AVOGADRO'S constant and atmospheric transparency. <i>F. E. Fowle</i>	40, 435
BAND. See also under Spectra.	
Modification in, resulting from presence of foreign gas. <i>R. W. Wood</i>	26, 41
spectrum of vanadium. <i>H. Koenen</i>	26, 129
which appear in spectrum of calcium arc burning in presence of hydrogen, Sun-spot. <i>Charles M. Olmsted</i>	27, 66
spectra by W. Ritz. <i>Pierre Weiss</i>	35, 75
and series spectra, Origin of selective continuous absorption of. <i>J. Koenigsberger</i>	35, 139
spectra of aluminium, cadmium, and zinc. <i>Emily E. Howson</i>	36, 286
spectrum of nitrogen under high dispersion. First Deslandres' group of positive. <i>Raymond T. Birge</i>	39, 50
Effect of self-induction on the nitrogen. <i>E. P. Lewis</i>	40, 148
of ammonia, Ultra-violet. <i>E. P. Lewis</i>	40, 154
spectra, On Thiele's "phase" in. <i>H. S. Uhler</i>	42, 72
Structure of third cyanogen, and associated tails. <i>H. S. Uhler and R. A. Patterson</i>	42, 434
spectra ascribed to titanium oxide, magnesium hydride, and calcium hydride, Production in electric furnace of. <i>Arthur S. King</i>	43, 341
and line spectra of iodine. <i>R. W. Wood and M. Kimura</i>	46, 181
BARIUM, Magnetic separation of lines of. <i>B. E. Moore</i>	28, 1
Series in spectrum of. <i>F. A. Saunders</i>	28, 223; 32, 153

	VOLUME AND PAGE
BARIUM (<i>Continued</i>)	
Series in spectrum of. <i>W. Ritz</i>	29, 243
Infra-red arc spectrum of. <i>H. M. Randall</i>	42, 195
Variation with temperature of electric furnace spectrum of. <i>Arthur S. King</i>	48, 13
BAXANDALL'S explanation of an "abnormal" solar spectrum. <i>George E. Hale</i>	46, 291
BINARIES, Variable star RZ Cassiopeiae. <i>John Stein</i>	29, 308
Origin of. <i>Henry Norris Russell</i>	31, 185
Orbits of eighty-seven eclipsing—a summary. <i>Harlow Shapley</i>	38, 158
Parallaxes of four visual. <i>Frederick Slocum</i>	41, 237
Densities of visual. <i>E. Öpik</i>	44, 292
Spectroscopic. See under SPECTROSCOPIC BINARIES.	
BISMUTH line λ 4722, Structure of. <i>Lester Aronberg</i>	47, 102
BLACK BODY, Temperature of wedge-shaped cavity and its use as a. <i>B. J. Spence</i>	37, 194
and true temperatures for tungsten, tantalum, molybdenum, and carbon. <i>C. E. Mendenhall</i> and <i>W. E. Forsythe</i>	37, 380
BODE'S law and spiral structure in nebulae. <i>William Sutherland</i>	34, 251
"BOMBS," Solar hydrogen. <i>Ferdinand Ellerman</i>	46, 298
BONN, Radial velocities of 99 stars observed at. <i>F. Küstner</i>	27, 301
BOOKS RECEIVED	34, 414; 37, 222; 47, 57
RS BOÖTIS, Variation in light and color of. <i>Frederick H. Seares</i> and <i>Harlow Shapley</i>	48, 214
BORIC anhydride, Transparency of. <i>Theodore Lyman</i>	28, 85
BOSS 46, Orbit of spectroscopic binary. <i>Walter S. Adams</i> and <i>Gustaf Strömberg</i>	47, 329
BOSS 2285, Orbit of the spectroscopic binary. <i>Alfred H. Joy</i> and <i>Giorgio Abetti</i>	50, 391
BOSSEKOP, Auroral expedition to, in spring of 1913. <i>Carl Störmer</i>	38, 311
BRACE prism, Polarization spectrophotometer using. <i>Harvey</i> <i>Brace Lemon</i>	39, 204
BRIGHTNESS, Change of spectrum and color index with distance and absolute. <i>J. C. Kapteyn</i>	40, 187
spectrum, and temperature of Nova Aquilae No. 3, Change in. <i>Mentore Maggini</i> . (Errata, 50, 311)	48, 303
BROMINE at high temperatures, Absorption spectrum of. <i>E. J. Evans</i>	32, 291
<i>Bulletin Astronomique</i> , Regarding the. <i>B. Baillaud</i>	50, 76
CADMIUM, Band spectrum of. <i>Emily E. Howson</i>	36, 286
CALCIUM arc burning in presence of hydrogen, Sun-spot bands in. <i>Charles M. Olmsted</i>	27, 66
arc in vacuo, Spectrum of. <i>Henry Crew</i> and <i>George V.</i> <i>McCauley</i>	39, 29

CALCIUM (*Continued*)

arc, Non-existence of line λ 6708 in. <i>H. G. Woodward</i>	41, 169
arc, Pole-effect in. <i>Henry G. Gale and Walter T. Whitney</i>	43, 161
<i>Walter T. Whitney</i>	44, 165
when produced by cathodo-luminescence, Spectrum of. <i>Arthur S. King and Edna Carter</i>	44, 303
Effect of electric field on lines of. <i>Janet T. Howell</i>	44, 87
Relative intensities of yellow, orange, and red lines of, in electric furnace spectra. <i>Arthur S. King</i>	29, 190
hydride, Production in electric furnace of banded spectra ascribed to, <i>Arthur S. King</i>	43, 341
Variation with temperature of electric furnace spectrum of. <i>Arthur S. King</i>	48, 13
lines H, K, and λ 4227, Relative intensities of, in an electric furnace. <i>Arthur S. King</i>	28, 389
lines H and K, Further study of. <i>Arthur S. King</i>	29, 381
lines H, K, and g, Effects of variations of vapor-density on. <i>Oliver J. Lee</i>	34, 397
lines H and K, Absolute wave-lengths of, in some terrestrial sources. <i>Charles E. St. John</i>	31, 143
lines H and K, Reversal of, in stellar spectra. <i>G. Eberhard and K. Schwarzschild</i>	38, 292
lines H and K, Wave-lengths of iron arc lines in neighborhood of. <i>E. G. Bilham</i>	42, 469
Magnetic separation of lines of. <i>B. E. Moore</i>	33, 385
Series in spectrum of. <i>F. A. Saunders</i>	32, 153
Wave-lengths of spark spectrum of. <i>Frank Lawrence Cooper</i>	29, 329
Spectrum of. <i>James Barnes</i>	27, 152
New lines in spectrum of. <i>James Barnes</i>	30, 14
bands at λ 6382 and λ 6389. <i>James Barnes</i>	31, 175
vapors, Spectrum of. <i>James Barnes</i>	39, 370
vapor over sun-spots and other special regions, Motion and condition of. <i>Charles E. St. John</i>	34, 57, 131
SS CAMELOPARDALIS, Eclipsing variable. <i>R. J. McDiarmid</i>	45, 50
Y CAMELOPARDALIS, Light-curve and orbital elements of. <i>Martha Betz Shapley</i>	46, 56
9 CAMELOPARDALIS, Spectroscopic system. <i>Oliver Justin Lee</i>	37, 1
CAMERA objectives for spectrographs. <i>J. S. Plaskett</i>	29, 290
CANAL rays, Production of light by. <i>Gordon Scott Fulcher</i>	33, 28
rays in air, Stark-Doppler effect for hydrogen. <i>Gordon S. Fulcher</i>	35, 101
S CANCRI, Elements of eclipsing variable. <i>Harlow Shapley</i>	36, 269
CAPACITY, Possible influence of variations of, in spark circuit. <i>Frank Lawrence Cooper</i> . (Errata, 30, 400)	29, 329

CAPACITY (*Continued*)

and self-induction, Effect of, on wave-lengths of spark lines. <i>Clinton Maury Kilby</i>	30, 243
CAPE, RADIAL velocities of 119 stars observed at the. <i>Joseph Lunt</i> (Errata, 50, 311; 52, 317)	48, 261
Radial velocities of 185 stars observed at the. <i>Joseph Lunt</i> .	50, 161
42 CAPRICORNI, Orbit of the spectroscopic binary. <i>Joseph Lunt</i> .	47, 134
CARBON, and the temperature variation of its reflecting power, Relation between black-body and true temperatures for. <i>C. E. Mendenhall and W. E. Forsythe</i>	37, 380
at glowing temperatures, Deviation from Lambert's cosine law of emission from. <i>A. G. Worthing</i>	36, 345
Disulphide vapor, Absorption spectrum of. <i>Irene M. Pauly</i> .	50, 155
CARBONIC and other oxygen acids, Selective reflection of salts of. <i>Leighton B. Morse</i>	26, 225
a CARINAE, Orbit of spectroscopic binary. <i>Heber D. Curtis</i> .	26, 268
RZ CASSIOPEIAE, Binary variable star. <i>John Stein</i>	29, 308
Photometric study of eclipsing variable. <i>R. S. Dugan</i> .	44, 117
SU CASSIOPEIAE, Photographic light-curve of. <i>J. A. Parkhurst</i> Cepheid variable. <i>Walter S. Adams and Harlow Shapley</i> .	28, 278 47, 46
TV, TW, TX CASSIOPEIAE, Elements of eclipsing systems. <i>R. J.</i> <i>McDiarmid</i> . (Errata, 44, 263)	42, 412
CASTOR, Mass ratios in systems of. <i>Henry Norris Russell</i> .	32, 363
CATALOGUE of 182 dark markings of sky. <i>E. E. Barnard</i> . (Correc- tion, 49, 360)	49, 1
CATHODE arc-spectra, Difference between anode and. <i>W. J.</i> <i>Humphreys</i>	27, 200
metals, Spectra of. I. <i>Philip Ely Robinson</i>	42, 473
-ray fluorescence of sodium vapor. <i>R. W. Wood and R. H.</i> <i>Galt</i>	33, 72
rays, Production of light by. <i>Gordon S. Fulcher</i>	34, 388
CATHODO-LUMINESCENCE, Spectra of calcium and iron when produced by. <i>Arthur S. King and Edna Carter</i>	44, 303
CELL, PHOTO-ELECTRIC, in stellar photometry, <i>W. F. Schulz</i> .	38, 187
Illumination-current relationship in potassium. <i>Herbert E. Ives</i> Wave-length sensibility-curves of potassium. <i>Herbert E. Ives</i> Sensitive. <i>E. O. Hulburt</i>	39, 428 40, 182 41, 400
α CENTAURI as a spectroscopic binary. <i>Joseph Lunt</i>	48, 182
δ CEPHEI, Light-curve of. <i>Joel Stebbins</i>	27, 188
U CEPHEI, Elements of eclipsing variable. <i>Harlow Shapley</i> .	36, 269
Period of. <i>Martha Betz Shapley</i>	44, 51
CEPHEID VARIABLES, Variations in spectral type of twenty. <i>Harlow</i> <i>Shapley</i>	44, 273

CEPHEID VARIABLES (*Continued*)

Distances and luminosities of 139. <i>Harlow Shapley</i>	48, 279
CEPHEID VARIATION, Nature and cause of. <i>Harlow Shapley</i>	40, 448
Three notes on. <i>Harlow Shapley</i>	49, 24
Cause of. <i>C. D. Perrine</i>	41, 307; 50, 81
CERIUM, Arc spectrum of. <i>Frank Lawrence Cooper</i> . (Errata, 30, 400)	29, 329
CETI, MIRA, Variability of, and temperature of sun-spots. <i>A. L. Cortie</i>	26, 123
13 CETI, Orbit of spectroscopic binary. <i>Philip Fox</i>	27, 372
CHARTS by Johann Palisa and Max Wolf, Invitation for subscrip- tions to. <i>Johann Palisa</i>	28, 86; 30, 70
CHROMIUM, Infra-red arc spectrum of. <i>H. M. Randall and E. F. Barker</i>	49, 54
Selective reflection of salts of. <i>Herbert A. Clark</i>	35, 48
Spark spectrum of. <i>Frank Lawrence Cooper</i> . (Errata, 30, 400)	29, 329
Method of investigating Stark effect for metals, with results for. <i>J. A. Anderson</i>	46, 104
Variation with temperature of electric furnace spectrum of. <i>Arthur S. King</i>	41, 86
Zeeman effect and pressure displacement for. <i>Arthur S. King</i>	31, 433
Zeeman effect for. <i>Harold D. Babcock</i>	33, 217
<i>J. E. Purvis</i>	34, 312
CHROMOSPHERE, Wave-lengths of, from spectra obtained at 1905 eclipse. <i>S. A. Mitchell</i>	38, 407
CLASS, see TYPE	
CLASSIFICATION of stellar spectra, Correspondence concerning	33, 260
CLUSTERS, globular, Spectra of. <i>E. A. Fath</i>	
First Paper. See Lick Observatory Bulletin 5, 71. 1909	
Second Paper	33, 58
Third paper	37, 198
Distances of. <i>Harlow Shapley</i>	48, 89
Distribution in space, and dimensions of 69. <i>Harlow Shapley</i>	48, 154
Distribution of stars in twelve. <i>Francis G. Pease and Harlow Shapley</i>	45, 225
Galactic planes in 41. <i>Harlow Shapley and Martha Shapley</i>	50, 42
Messier 3, New variables in center of. <i>Harlow Shapley</i>	40, 443
Energy in spectrum of integrated light of, and in neighboring stars. <i>E. Hertzsprung</i>	41, 10
Messier 13, Colors of some stars in. <i>E. E. Barnard</i>	29, 72
Photographic determination of colors of stars in. <i>E. E. Barnard</i>	40, 173
Photographic effective wave-lengths of. <i>Knut Lundmark</i> and <i>Bertil Lindblad</i>	46, 206; 50, 376
N. G. C. 1647, Effective wave-lengths of 184 stars in. <i>E. Hertzsprung</i>	42, 92

CLUSTERS (*Continued*)

Color-indices in. <i>F. H. Seares</i>	42, 120
Studies based on colors and magnitudes in stellar. <i>Harlow Shapley</i> . For titles, see AUTHOR INDEX	
45, 118, 123, 140, 164; 46, 64; 48, 89, 154, 279; 49, 24, 96, 249, 311; 50, 42, 107	
COBALT, Absorption in red of acetate, nitrate, and sulphate of. <i>Frank L. Cooper</i>	32, 309
Infra-red arc spectrum of. <i>H. M. Randall</i> and <i>E. F. Barker</i>	49, 54
Variation with temperature of electric furnace spectrum of. <i>Arthur S. King</i>	42, 344
COELOSTAT mirrors, Polarizing effect of. <i>Charles E. St. John</i>	29, 301
COLLIMATION of the correcting lens. <i>J. S. Plaskett</i>	32, 243
COLOR of faint stars. <i>Frederick H. Seares</i>	39, 361
star. Study in physiological optics. <i>Louis Bell</i>	31, 234
Note on Bell's paper on star. <i>R. T. A. Innes</i>	32, 321
of stars in Cluster M ₁₃ (Hercules). <i>E. E. Barnard</i>	29, 72; 40, 173
and magnitudes in stellar clusters, Studies based on. <i>Harlow Shapley</i> . For titles, see Author Index	
Change with distance and apparent magnitude. <i>P. J. Van Rhijn</i>	43, 36
-changes of certain variable stars of short period. <i>F. C. Jordan</i>	50, 174
-curve and light-elements of W Ursae Majoris. <i>Harlow Shapley</i> and <i>J. Van der Bilt</i>	46, 281
-curve of XZ Cygni. <i>Martha Betz Shapley</i>	45, 182
-estimates, Various scales for. <i>J. G. Hagen</i> . (Errata, 35, 359)	34, 261
-filter and isochromatic plate in astronomical photography. <i>Robert James Wallace</i>	27, 106
-filters and absorption of light in space. <i>J. A. Parkhurst</i>	30, 33
-index, Change of spectrum and, with distance and absolute brightness. Present state of the question. <i>J. C. Kapteyn</i>	40, 187
-indices in cluster N. G. C. 1647. <i>Frederick H. Seares</i>	42, 120
-scales of one and of two dimensions. Correlation between. <i>J. G. Hagen</i>	49, 282
-sensibility of selenium cells. <i>Joel Stebbins</i>	27, 183
-sensitiveness of photo-electric cells. <i>T. Shinomiya</i>	49, 303
COMET 1907 IV (Daniel), Spectrum of. <i>W. W. Campbell</i>	28, 229
1908 III (Morehouse), Photographic observations of. <i>E. E. Barnard</i>	28, 292, 384; 29, 65
Spectrum of. <i>Edwin B. Frost</i> and <i>J. A. Parkhurst</i>	29, 55
<i>W. W. Campbell</i> and <i>Sebastian Albrecht</i>	29, 84
<i>H. Rosenberg</i>	30, 267
<i>A. de la Baume Pluvinel</i> and <i>F. Baldet</i>	34, 89
<i>A. Fowler</i>	35, 85

COMET ^{*}(Continued)

1910 I, The January. <i>Karl Bohlin</i>	33, 185
1910 II (Halley), Photographs of. <i>Oliver J. Lee</i>	30, 237
Brightness of, as measured with a selenium photometer. <i>Joel Stebbins</i>	32, 179
Distribution of brightness in tail of. <i>K. Schwarzschild</i> and <i>E. Kron</i>	34, 342
Visual observations of. <i>E. E. Barnard</i> . (Errata, 40, 488)	39, 373
Southern tail of, seen May 17 and 18. <i>E. E. Barnard</i>	46, 83
1911 V (Brooks), Photographic observations of. <i>E. E.</i> <i>Barnard</i>	36, 1
1915 a (Mellish), Spectrum of. <i>A. Estelle Glancy</i>	49, 196
Committee on	28, 410
Theory of tails of. <i>Peter Lebedew</i>	31, 385
COMPARATOR, New form of spectro-. <i>Ralph E. DeLury</i>	46, 219
CONSTANT-ERROR term K, Nature of. <i>C. D. Perrine</i>	43, 286; 44, 244
CONSTANT of radiation, Value of solar. <i>C. G. Abbot</i> and <i>F. E. Fowle</i>	33, 191
CONTROL for silvered specula, Temperature. <i>Heber D. Curtis</i>	26, 256
CO-ORDINATES, Generalized, relativity, and gravitation. <i>Edwin</i> <i>Bidwell Wilson</i>	45, 244
COPPER, in arc under reduced pressure, Spectrum of. <i>James</i> <i>Barnes</i>	34, 159
CORONA, Polarized fluorescence of metallic vapors and the solar. <i>R. W. Wood</i>	28, 75
of June 8, 1918, a photo-electric determination of brightness of. <i>Jacob Kunz</i> and <i>Joel Stebbins</i>	49, 137
CORONAL streams, position of certain, on assumption that corona is a mechanical product. <i>John A. Miller</i>	33, 303
streamers, Heliocentric position of a certain class of. <i>John A.</i> <i>Miller</i>	27, 286
CORRECTIONS. See ERRATA	
CORRECTION of optical surfaces. <i>F. Twyman</i>	48, 256
CRITERIA, Spectral, for determination of absolute stellar magnitudes, <i>Walter S. Adams</i> and <i>Arnold Kohlschütter</i>	40, 385
W CRUCIS, Elements of eclipsing variable. <i>Henry Norris Russell</i>	36, 133
CURRENT, Influence of variations of, in spark circuit. <i>Frank</i> <i>Lawrence Cooper</i> . (Errata, 30, 400)	29, 329
CYANOGEN band and associated tails, Structure of third. <i>H. S.</i> <i>Uhler</i> and <i>R. A. Patterson</i>	42, 434
α CYGNI, Radial velocity of. <i>Oliver J. Lee</i>	34, 303
32 θ_2 CYGNI, Orbit of spectroscopic binary. <i>J. B. Cannon</i>	47, 193
P CYGNI, Spectrum of. <i>Edwin B. Frost</i>	35, 286
SW CYGNI, Elements of eclipsing variable. <i>Harlow Shapley</i>	36, 269

	VOLUME AND PAGE
XX CYGNI, Light-curve of. <i>Harlow Shapley</i> and <i>Martha Betz Shapley</i>	42, 148
XZ CYGNI, Color-curve of. <i>Martha Betz Shapley</i>	45, 182
W DELPHINI, Elements of eclipsing variable. <i>Henry Norris Russell</i>	36, 133
Elements of eclipsing variable. <i>Harlow Shapley</i>	36, 269
DELURY'S hypothesis as to effect of haze on measures of solar rotation. <i>C. G. Abbot</i>	45, 65
DENSITIES of second-type stars. <i>Harlow Shapley</i>	42, 271
DESLANDRES' groups of positive band spectrum of nitrogen, under high dispersion. <i>Raymond T. Birge</i>	39, 50
DEVIATION, Rotation of prisms of constant. <i>W. E. Forsythe</i>	45, 278
DIAMETERS of stars, Simplest form of stellar interferometer for determining angular, by means of elliptically polarized light. <i>S. Pokrowsky</i>	41, 147
DIFFRACTION phenomena possible at solar eclipses? <i>F. Biske (Biscoe)</i>	38, 192
DIMENSIONS of 69 globular clusters. <i>Harlow Shapley</i>	48, 154
DISPERSION of air and reduction of wave-lengths to vacuum. <i>Raymond T. Birge</i>	50, 72
DISPERSION, ANOMALOUS, in sun. <i>Charles E. St. John</i>	41, 28; 44, 311
<i>Sebastian Albrecht</i>	41, 333; 44, 1
and Fraunhofer lines—reply to objections. <i>W. H. Julius</i>	43, 43
Mutual repulsion of spectral lines, and other solar effects concerned with. <i>Sir Joseph Larmor</i>	44, 265
of metallic vapors, Study of, with electric furnace. <i>Arthur S. King</i>	45, 254
DISPERSION of light in space. <i>Paul R. Heyl</i>	30, 40
<i>Herbert E. Ives</i>	31, 157
DISPLACEMENT of spectral lines. <i>J. Larmor</i>	26, 120
DISTANCES of 69 globular clusters. <i>Harlow Shapley</i>	48, 154
of 139 Cepheid variables. <i>Harlow Shapley</i>	48, 279
of various celestial objects. <i>Harlow Shapley</i>	49, 249
-velocity equation in stellar motions, Cause of. <i>C. D. Perrine</i>	47, 179; 48, 295
DISTRIBUTION in space of 69 globular clusters. <i>Harlow Shapley</i>	48, 154
DOMINION Astrophysical Observatory, Stellar spectrograph of. <i>J. S. Plaskett</i>	49, 209
DOPPLER EFFECT in spectrum of hydrogen and mercury. Rejoinder to Mr. Hull's reply. <i>J. Stark</i>	26, 63
Comments on Mr. Stark's article. <i>G. F. Hull</i>	26, 117
Test of, for light-rays. <i>Prince B. Galitsin</i> and <i>J. Wilip</i>	26, 49
in connection with study of radial velocities on sun. <i>A. Cotton</i>	33, 375
θ DRACONIS, Orbit of spectroscopic binary. <i>Heber D. Curtis</i>	26, 263

ω DRACONIS, Definitive orbit of spectroscopic binary. <i>Arthur B. Turner</i>	26, 277
RR DRACONIS, Algol variable. <i>Frederick H. Seares</i>	36, 368; 37, 204
Visual and photographic range and provisional orbit of. <i>Harlow Shapley</i>	37, 154
SX DRACONIS, Orbital elements of. <i>W. Van B. Roberts</i>	42, 312
Z DRACONIS, Elements of. <i>Henry Norris Russell</i> and <i>Harlow Shapley</i>	39, 405
DUNÉR, Nils Christofer. <i>Anders Ångström</i>	41, 81
EARTH, Rigidity of. <i>A. A. Michelson</i>	39, 105
<i>A. A. Michelson</i> and <i>H. G. Gale</i>	50, 330
Theory of tides in pipes on a rigid. <i>F. R. Moulton</i>	50, 346
light, or brightness, exclusive of star light, of midnight sky <i>W. J. Humphreys</i>	35, 273
<i>P. Salet</i>	37, 291
EARTHS, alkaline, Spectra of compounds of. <i>Albert Eagle</i>	30, 231
certain rare, Effect of a magnetic field upon absorption spectra of. <i>William Frederick Schulz</i>	30, 383
ECHLETTE grating, Concerning the. <i>A. Trowbridge</i>	34, 317
ECLIPSE, Photography of "flash" spectrum without an. <i>George E. Hale</i> and <i>Walter S. Adams</i>	30, 222
of 1905, Wave-lengths of chromosphere from spectra obtained at. <i>S. A. Mitchell</i>	38, 407
of April 17, 1912, Total solar radiation during annular. <i>W. H. Julius</i>	37, 225
Are diffraction phenomena possible at? <i>F. Biske</i>	38, 192
Desirability of observations of solar rotation at times of. <i>Ralph E. De Lury</i>	47, 199
of June 8, 1918, Photo-electric determination of brightness of corona at. <i>Jacob Kunz</i> and <i>Joel Stebbins</i>	49, 137

PHOTO-VISUAL magnitudes of stars in Pleiades. <i>Harriet McWilliams Parsons</i>	47, 38
PICKERING, EDWARD C., Notice of death of.	49, 136
<i>Solon I. Bailey</i>	50, 233
α PISCUM, Variable radial velocity of. <i>Oliver J. Lee</i>	38, 502
Y PISCUM, Visual and photographic range and provisional orbit of. <i>Harlow Shapley</i>	37, 154
PLANETS, Slipher's spectrograms of the major. <i>V. Arcichovskij</i>	38, 504
Stellar magnitudes of sun, moon, and. <i>Henry Norris Russell</i>	43, 103
and their satellites, Albedo of. <i>Henry Norris Russell</i>	43, 173

	VOLUME AND PAGE
PLATINUM, palladium, and tantalum, Distribution of energy in spectra of. <i>George Vest McCauley</i>	37, 164
PLEIADES, Photo-visual magnitudes of stars in. <i>Harriet McWilliams Parsons</i>	47, 38
Stars in group of, but not belonging to the physical system. <i>J. A. Parkhurst</i>	47, 51
POLARITY of sun-spots, Magnetic. <i>George E. Hale, Ferdinand Ellerman, S. B. Nicholson, and A. H. Joy.</i> (Errata, 50, 77)	49, 153
POLARIZATION spectrophotometer using the Brace prism. <i>Harvey Brace Lemon</i>	39, 204
of night sky. <i>R. J. Strutt</i> (Rayleigh)	50, 227
<i>Harold D. Babcock</i>	50, 228
POLARIZED fluorescence of metallic vapors and solar corona. <i>R. W. Wood</i>	28, 75
POLARIZING effect of coelostat mirrors. <i>Charles E. St. John</i>	29, 301
POLE-EFFECT in iron arc, Study of. <i>Charles E. St. John and Harold D. Babcock</i>	42, 231
in calcium arc. <i>Henry G. Gale and Walter T. Whitney</i>	43, 161
<i>Walter T. Whitney</i>	44, 65
in electric arc, Cause of so-called. <i>T. Royds</i>	45, 112
On pole-effect. <i>Henry G. Gale</i>	45, 142
Elimination of, from source for secondary standards of wavelength. <i>Charles E. St. John and Harold D. Babcock</i>	46, 138
POLES in spark discharge, Are luminous metallic particles thrown out from. <i>G. F. Hull</i>	26, 66
POULKOVA, The Observatory of. <i>Edwin B. Frost</i>	47, 139
PREFERENTIAL motion, Examination of planetary nebulae for. <i>C. D. Perrine.</i> (Errata, 48, 204)	46, 175
motion, Relation to proper motion of, and of progressions of spectral class and magnitude-velocity. <i>C. D. Perrine.</i> (Errata, 48, 204)	46, 266
PRESSURE, Arc spectra under heavy. <i>W. J. Humphreys</i>	26, 18
Apparatus for obtaining electric arcs under heavy. <i>W. J. Humphreys</i>	26, 36
-shift of spectrum lines, Cause of. <i>W. J. Humphreys</i>	26, 297
Effect of, upon arc spectra. No. I.—Iron. <i>W. Geoffrey Duffield</i>	26, 375
-shift of spectral lines, Luminous particle a strong magnet and consequent. <i>W. J. Humphreys</i>	27, 194
Magnesium spectrum under reduced. <i>E. E. Brooks</i>	29, 177
displacement for spectra of iron, chromium, and titanium. Correspondence between Zeeman effect and. <i>Arthur S. King</i>	31, 433

PRESSURE (*Continued*)

-shift of violet-sided spectral lines. <i>W. J. Humphreys</i>	31, 459
Widening of hydrogen lines by high. <i>R. Rossi</i>	34, 299
-shift of spectral lines. <i>Fernando Sanford</i>	35, 1
Spectra of iron and titanium under moderate. <i>Henry G. Gale</i> and <i>Walter S. Adams</i>	35, 10
upon electric furnace spectra, Effect of. <i>Arthur S. King</i>	35, 183
-shift of spectral lines. <i>W. J. Humphreys</i>	35, 268
displacement of spectral lines. <i>T. H. Havelock</i>	35, 304
-shift of iron lines. <i>H. G. Gale</i> and <i>W. S. Adams</i>	37, 391
-shift of lines of zinc spectrum at low pressures. <i>V. F. Swaim</i> displacement of spectral lines and molecular constitution. <i>G. L. Livens</i>	40, 137 40, 226

PRISMS, Convenient forms of comparison-. <i>Louis Bell</i>	29, 305
On comparison. <i>H. Konen</i>	30, 318
Improved method of using quartz. <i>F. Stanley</i>	31, 371
Determination of absolute wave-lengths with objective-. <i>Edward C. Pickering</i>	31, 372
Determination of stellar velocities with objective-. <i>R. W.</i> <i>Wood</i>	31, 376
Additional notes on radial velocities with objective-. <i>R. W.</i> <i>Wood</i>	31, 460
with curved faces for spectrograph or spectroscope. <i>Ch.</i> <i>Féry</i>	34, 79
of constant deviation, Rotation of. <i>W. E. Forsythe</i>	45, 278
producing constant deviation by two refractions and one internal reflection, Generalization of the problem of the rotation of. <i>Horace Scudder Uhler</i>	47, 65

PROCYON, and Arcturus with high dispersion, Spectra of Sirius. <i>Walter S. Adams</i>	33, 64
--	--------

PROMINENCES, Photographic observations of. <i>Giorgio Abetti</i> and <i>Ruth Emily Smith</i>	33, 141
A large. <i>J. Evershed</i>	28, 79
Angular speed of rotation of a long-enduring. <i>J. Evershed</i>	33, 1
of May 21, 1907, The large. <i>J. Fényi</i>	27, 78
A large eruptive. <i>Philip Fox</i>	26, 155
Distribution of eruptive. <i>Philip Fox</i>	28, 253
of October 19-21, 1914. <i>Oliver J. Lee</i>	41, 168
of May 29 and July 15, 1910, Great eruptive. <i>Edison Pettit</i>	50, 206
Two solar. <i>Frederick Slocum</i>	32, 125
Circulation in solar atmosphere as indicated by. <i>Frederick</i> <i>Slocum</i>	33, 108; 37, 354
of October 10, 1910. <i>Frederick Slocum</i>	34, 204

	VOLUME AND PAGE
PROMINENCES (<i>Continued</i>)	
of June 19-20, 1911. <i>Frederick Slocum</i>	35, 301
Attraction of sun-spots for. <i>Frederick Slocum</i>	36, 265
PROPER MOTIONS, Relative intensity at different wave-lengths of spectra of stars having large and small. <i>Walter S. Adams</i>	39, 89
Exceeding 0".50, List of stars with. <i>Adriaan van Maanen</i> . (Addenda and Errata, 43, 248)	41, 187
Dependence of, upon magnitudes and spectral subdivisions of stars within class B. <i>C. D. Perrine</i>	41, 315
New determination of mean parallaxes of stars of given magni- tude and. <i>P. J. Van Rhijn</i>	43, 36
Determinations of apex and velocity of solar motion from radial velocities of brighter stars, including an apparent rela- tion to. <i>C. D. Perrine</i> . (Errata, 44, 263)	44, 103
Different positions of solar apex yielded by radial velocities and. <i>C. D. Perrine</i>	45, 103
Relation to, of preferential motion and of progressions of spectral class and magnitude-velocity. <i>C. D. Perrine</i> . (Errata, 48, 204)	46, 266
Helium star with large parallax, radial velocity, and. <i>J. Voûte</i>	48, 144
PUBLICATIONS received	34, 414; 37, 222; 47, 57
PULSATION theory, Residual radial velocities of Cepheid variables and their bearing on. <i>C. D. Perrine</i>	50, 148
σ PUPPIS, Orbit of spectroscopic binary. <i>J. Lunt</i>	44, 260
PURKINJE effect, Property of photographic plate analogous to. <i>J. A. Parkhurst</i>	49, 202; 50, 290
PYRHELIOMETER and pyrheliometric scale, Ångström compensation- <i>A. K. Ångström</i>	40, 274
PYRHELIOMETRIC scale. <i>C. G. Abbot</i> and <i>L. B. Aldrich</i>	33, 125
Observations on Mount Whitney. <i>A. K. Ångström</i> and <i>E. H. Kennard</i>	39, 350
PYROMETER adapted to wide range of laboratory uses, Morse optical. <i>W. E. Forsythe</i>	43, 295
PYROMETRY, Monochromatic and neutral-tint screens in optical. <i>W. E. Forsythe</i>	49, 237
Effective wave-length of transmission of red pyrometer glasses and other notes on. <i>Edward P. Hyde</i> , <i>F. E. Cady</i> and <i>W. E. Forsythe</i>	42, 294
QUANTUM theory, Radiation-pressure and. <i>Megh Nad Saha</i>	50, 220
QUARTZ prisms. Improved method of using. <i>F. Stanley</i>	31, 371
RADIAL motion in sun-spots. <i>Charles E. St. John</i>	37, 322; 40, 158
<i>W. H. Julius</i>	40, 1
<i>J. Evershed</i>	40, 156

RADIAL VELOCITIES. For variable velocities, see SPECTROSCOPIC
BINARIES

of 99 stars of second and third spectral classes observed at Bonn. <i>F. Küstner</i>	27, 301
Effect of increasing slit-width upon accuracy of. <i>J. S. Plaskett</i>	28, 259
with objective-prism, Determination of. <i>R. W. Wood</i>	31, 376, 460
Accuracy of. <i>Edwin B. Frost</i>	31, 377
of certain stars of Orion type, Corrections to. <i>Edwin B. Frost</i>	31, 430
Probable errors of. <i>J. S. Plaskett</i>	32, 230
of α Cygni. <i>Oliver L. Jee</i>	34, 303
of 100 stars with measured parallaxes. <i>Walter S. Adams</i> and <i>Arnold Kohlschütter</i> . (Errata, 40, 488)	39, 341
Systematic errors of stellar. <i>Sebastian Albrecht</i>	40, 473
of stars of class Md. <i>Paul W. Merrill</i>	41, 247
and proper motions upon magnitudes and spectral subdivi- sions of stars within class B, Dependence of. <i>C. D.</i> <i>Perrine</i>	41, 315
of stars and their magnitudes, Apparent relation between. <i>C. D. Perrine</i>	41, 395
Spectral distribution of stars of large. <i>C. D. Perrine</i>	41, 401
of 500 stars. <i>Walter S. Adams</i>	42, 172
of stars of different spectral classes and their relation to solar motion, Peculiarities of residual. <i>C. D. Perrine</i>	42, 305
Nature of constant-error term found in determination of solar motion from. <i>C. D. Perrine</i>	43, 286
of brighter stars, including an apparent relation to proper motion, Determinations of apex and velocity of solar motion from. <i>C. D. Perrine</i> . (Errata, 44, 263)	44, 103
and proper motions, Cause of the different positions of solar apex yielded by. <i>C. D. Perrine</i>	45, 103
and absolute magnitudes of stars of late spectral types, Deter- mination of solar motion and stream-motion from. <i>Gustaf</i> <i>Strömberg</i>	47, 7
Cause of distance-velocity equation in stellar motions. <i>C. D.</i> <i>Perrine</i>	47, 179
of 60 southern stars. <i>Joseph Lunt</i>	47, 201
and absolute magnitude. Comments on Professor Perrine's article. <i>Walter S. Adams</i> and <i>Gustaf Strömberg</i>	47, 189
Helium star with large parallax, proper motion, and. <i>J. Voûte</i>	48, 144
Excess of outward motion of stars of class B. <i>C. D. Perrine</i>	48, 145
of 2ω Leonis. <i>Edwin B. Frost</i>	48, 258
of 119 stars observed at the Cape. <i>Joseph Lunt</i> . (Errata, 50, 311; 52, 317).	48, 261

of nitrogen under high dispersion. First Deslandres' group of positive band. <i>Raymond T. Birge</i>	39, 50
Chief lines in region λ 3880 to λ 4700. <i>John S. Clark</i>	40, 332
of oxygen, Chief lines in region λ 3880 to λ 4700. <i>John S. Clark</i>	40, 332
of palladium, Distribution of energy in. <i>George Vest McCauley</i>	37, 164
of platinum, Distribution of energy in. <i>George Vest McCauley</i>	37, 164
of selenium vapor and effect of temperature upon it, Absorption. <i>E. J. Evans</i> and <i>G. N. Antonoff</i>	34, 277
of silver heated in carbon-tube furnace, Emission. <i>W. Geofrey Duffield</i> and <i>R. Rossi</i>	28, 371
of sodium, Complete Balmer series in. <i>R. W. Wood</i>	29, 97
vapor, Resonance and magnetic rotation of. <i>R. W. Wood</i> and <i>Felix E. Hackett</i>	30, 339
vapor. <i>James Barnes</i>	39, 370
of strontium, Series in. <i>F. A. Saunders</i>	32, 153
Magnetic separation of. <i>B. E. Moore</i>	33, 385
of sulphur dioxide, Absorption. <i>Frances Lowater</i>	31, 311
of tantalum, Distribution of energy in. <i>George Vest McCauley</i>	37, 164
of tellurium vapor and effect of high temperature upon it, Absorption. <i>E. J. Evans</i>	36, 228
of thorium, Arc. <i>Frank L. Cooper</i> . (Errata, 30, 400)	29, 329
in magnetic field, Separation of lines of. <i>B. E. Moore</i>	30, 144, 178
of titanium, $\lambda\lambda$ 3900 and 3913, Arc and spark. <i>Norton A. Kent</i> and <i>Alfred H. Avery</i>	27, 70
Electric furnace for spectroscopic investigations, with results for. <i>Arthur S. King</i>	28, 300
from λ 5866 to λ 7364, Arc. <i>E. J. Evans</i>	29, 160
Redetermination of arc and spark lines. <i>Clinton Maury Kilby</i>	30, 243
Correspondence between Zeeman effect and pressure displacement for. <i>Arthur S. King</i>	31, 433
Influence of magnetic field upon spark. <i>Arthur S. King</i> under moderate pressures. <i>Henry G. Gale</i> and <i>Walter S. Adams</i>	34, 225
Enhanced lines in electric furnace. <i>Arthur S. King</i>	35, 10
Variation with temperature of electric furnace. <i>Arthur S. King</i>	37, 119
oxide, Production in electric furnace of banded. <i>Arthur S. King</i>	39, 139
of vanadium, Band. <i>H. Konen</i>	43, 341
Electric furnace for spectroscopic investigations, with results for. <i>Arthur S. King</i>	26, 129
	28, 300

SPECTRA, SPECTRAL, or SPECTRUM (*Continued*)of vanadium (*continued*)

Arc, in region λ 5800 to λ 7364. <i>H. Shaw</i>	30, 127
Redetermination of wave-lengths of arc and spark. <i>Clinton Maury Kilby</i>	30, 243
Effect of pressure on arc. <i>R. Rossi</i>	34, 21
Variation with temperature of electric furnace. <i>A. S. King</i>	41, 86
of yttrium. <i>Emil Paulson</i>	41, 72
of zinc at low pressures, Pressure-shift of. <i>V. F. Swaim</i>	40, 137
infra-red, Dispersion of metals in. <i>L. R. Ingersoll</i>	32, 265
Some. <i>H. M. Randall</i>	34, 1
arc spectrum of barium. <i>H. M. Randall</i>	42, 195
Photographic. <i>Charles F. Meyer</i>	45, 93
radiation, Absorption of near, by water-vapor. <i>W. W. Sleator</i> . (Errata, 48, 204)	48, 125
arc spectrum of iron. <i>H. M. Randall</i> and <i>E. F. Barker</i>	49, 42
arc spectra of cobalt, nickel, manganese, and chromium. <i>H. M. Randall</i> and <i>E. F. Barker</i>	49, 54
absorption for some diatomic gases, Measurements on near. <i>Elmer S. Imes</i>	50, 251
Pole-effect, Difference between anode and cathode arc-. <i>W. J. Humphreys</i>	27, 200
Near poles of iron arc. <i>W. Geoffrey Duffield</i>	27, 260
lines near poles of metallic arc, Possible origin of. <i>R. Rossi</i>	35, 279
in iron arc, Study of. <i>Charles E. St. John</i> and <i>Harold D. Babcock</i>	42, 231
in calcium arc. <i>Henry G. Gale</i> and <i>Walter T. Whitney</i>	43, 161
<i>Walter T. Whitney</i>	44, 65
in electric arc, Cause of so-called. <i>T. Royds</i>	45, 112
On pole-effect. <i>Henry G. Gale</i>	45, 142
Elimination of, from source for secondary standards of wave-length. <i>Charles E. St. John</i> and <i>Harold D. Babcock</i>	46, 138
Pressure shift of. <i>J. Larmor</i>	26, 120
<i>Fernando Sanford</i>	35, 1
<i>W. J. Humphreys</i>	35, 268
<i>T. H. Havelock</i>	35, 304
under heavy pressures, Arc. <i>W. J. Humphreys</i>	26, 18
Apparatus for obtaining electric arcs under heavy	26, 36
Constancy of wave-lengths. <i>H. Kayser</i>	26, 191
Cause of. <i>W. J. Humphreys</i>	26, 297
Iron arc. <i>W. Geoffrey Duffield</i>	26, 375
Luminous particle a strong magnet, and consequent. <i>W. J. Humphreys</i>	27, 194

SPECTROSCOPIC BINARIES	
Eight stars whose radial velocities vary. [α Tauri, f Tauri, 7 Camelopardalis, A Boötis, β Coronae, ξ Cygni, d Tauri, ζ Cephei]. <i>W. W. Campbell</i> and <i>J. H. Moore</i>	26, 292
Eleven stars [γ Persei, ξ Tauri, θ^2 Tauri, l Eridani, ζ Aurigae, ρ Orionis, β Canis, Majoris ν Draconis, 70 Ophiuchi, 111 Herculis, ϕ Cygni]. <i>W. W. Campbell</i>	29, 224
Two stars [x Carinae, ι Gruis]. <i>W. H. Wright</i>	26, 296
Five stars [ζ Canis Majoris, τ Puppis, o Velorum, d Carinae, q Velorum]. <i>Heber D. Curtis</i>	29, 229
Two stars [ν Puppis, ν Octantis]. <i>W. H. Wright</i>	29, 232
Eight stars [68 Cassiopeiae, ϕ^1 Orionis, c Orionis, 139 Tauri, δ Scorpii, 72 Ophiuchi, ϕ Draconis, d Serpentis]. <i>Edwin B.</i> <i>Frost</i> and <i>Oliver J. Lee</i>	30, 62
Seven stars [β Equulei, β Trianguli, γ Lyrae, θ Virginis, 78 Virginis, o ² Canis Majoris, ζ Canis Majoris]. <i>S. A.</i> <i>Mitchell</i>	30, 239
Four stars [α Cygni, 58 Tauri, B.D. 7 ^o 681 Tauri, θ Pegasi]. <i>Oliver J. Lee</i>	31, 176
Spectrographic notes [ϵ Orionis, ξ Persei, θ^2 Tauri, 69 Tauri]. <i>Edwin B. Frost</i>	29, 233
Four stars in Taurus stream [64 Tauri, 97 Tauri, 71 Tauri, 92 Tauri]. <i>Oliver J. Lee</i>	29, 240

SPECTROSCOPIC BINARIES (*Continued*)

Two stars in Taurus stream [B.D. 15°637 Tauri, 90 Tauri]. <i>Storrs B. Barrett</i>	32, 183
Nineteen stars [σ Andromedae, ι Cassiopeiae, ρ Tauri, ν Geminorum, 42 Camelopardalis, ϕ Geminorum, γ Cancri, θ Hydrae, σ Leonis, 23 Comae Berenices, η Coronae, ι Serpentis, γ Coronae, π Serpentis, γ Ophiuchi, ϕ Sagittarii, 13 Vulpeculae, 16 Lacertae, α Pegasi]. <i>Oliver J. Lee</i>	32, 300
Eighteen stars [f Piscium, ξ^2 Ceti, 125 Tauri, 40 Aurigae, 24 Canum Venaticorum, 33 Boötis, β Librae, B.D. 25°4165 in Vulpecula, ι Aquarii, λ Piscium, κ Cassiopeiae, π Andromedae, ω Cassiopeiae, g Persei, τ^8 Eridani, ϵ Persei, τ Tauri, τ Orionis, τ Canis Majoris, π Virginis, ι Boötis, α^2 Librae, ι Corona Borealis, α Ophiuchi, 102 Herculis, 111 Herculis, 14 Pegasi, γ Aquarii]. <i>Oliver J. Lee</i>	39, 39
κ Pavonis. <i>Alexander W. Roberts</i>	34, 164
α Cygni. <i>Oliver J. Lee</i>	34, 303
63 Tauri. <i>K. Schwarzschild</i>	38, 295
113 α Piscium. <i>Oliver J. Lee</i>	38, 502
66 Eridani, Preliminary note. <i>Edwin B. Frost</i>	48, 260
Orbit of 30 Arietis (Boss 593). <i>Walter S. Adams and Alfred H. Joy</i>	49, 186
9 Camelopardalis. <i>Oliver Justin Lee</i>	37, 1
42 Capricorni. <i>Joseph Lunt</i>	47, 134
α Carinae. <i>Heber D. Curtis</i>	26, 268
Boss 46, Cassiopeia. <i>Walter S. Adams and Gustaf Strömberg</i>	47, 329
α Centauri. <i>Joseph Lunt</i>	48, 182
13 Ceti. <i>Philip Fox</i>	27, 372
θ_2 Cygni. <i>J. B. Cannon</i>	47, 193
θ Draconis. <i>Heber D. Curtis</i>	26, 263
ω Draconis. <i>Arthur B. Turner</i>	26, 277
B.D. 78°412 (4 Hev. Draconis). <i>Oliver J. Lee</i>	43, 320
RX Herculis. <i>Harlow Shapley</i>	40, 399
Z Herculis. <i>Walter S. Adams and Alfred H. Joy</i>	49, 186
Boss 2285 (Hydra). <i>Alfred H. Joy and Giorgio Abetti</i>	50, 391
α Orionis. <i>J. Lunt</i> (Errata, 48, 204)	44, 250
β Orionis. <i>J. S. Plaskett</i>	30, 26
ι Orionis. <i>J. S. Plaskett and W. E. Harper</i> 27, 272; 28, 274;	30, 373
π^5 Orionis. <i>Oliver J. Lee</i>	38, 175
B.D. — 1°1004 (Orion). <i>J. S. Plaskett and W. E. Harper</i>	30, 373
ψ Orionis. <i>J. S. Plaskett</i>	28, 266
α Pavonis. <i>Heber D. Curtis</i>	26, 274

η Virginis. <i>Naozo Ichinohe</i>	26, 282
Graphic determination of elements of. <i>Kurt Laves</i>	26, 164
Determination of. <i>W. F. King</i>	27, 125
<i>H. C. Plummer</i>	28, 212
Two curiously similar. <i>J. S. Plaskett</i> and <i>W. E. Harper</i>	30, 373
Simple criterion for detection of anomalies in. <i>D. F. Comstock</i>	31, 364
Short method for determining. <i>Henry Norris Russell</i>	40, 282
under observation at different institutions	27, 161; 39, 264
Photometric tests of. <i>Joel Stebbins</i>	39, 459
Criterion for, with an application to ρ Leonis. <i>Frank Schlesinger</i>	41, 162
of class M. Distribution and characteristics of. <i>C. D. Perrine</i>	42, 370
Corrections to measured velocity of, depending upon lengths of exposure of spectrograms. <i>Frank Schlesinger</i>	43, 167
SPECTROSCOPIC investigations, Metallic arcs for. <i>A. H. Pfund</i>	27, 296
work, Inclosed arc for. <i>James Barnes</i>	34, 154
determination of aqueous vapor. <i>F. E. Fowle</i>	35, 149
resolving power. <i>C. M. Sparrow</i>	44, 76
field-light. <i>F. E. Fowle</i>	45, 213
SPECTROSCOPY, Plane grating for stellar. <i>J. S. Plaskett</i>	37, 373
SPECULA, Temperature control for silvered. <i>Heber D. Curtis</i>	26, 256
SPHERICAL errors of a thin lens-system, Abolition of two of. <i>James P. C. Southall</i>	33, 330
SPIRAL of obscuration in stellar universe. Reply to Mr. F. H. Seares. <i>H. H. Turner</i>	46, 226
Comments on Professor Turner's reply. <i>Frederick H. Seares</i>	46, 232
STANDARD system, Determination of wave-lengths of light for establishment of. <i>Paul Eversheim</i>	26, 172
STANDARDS, Wave-length measurements for establishment of system of spectroscopic. <i>C. Fabry</i> and <i>H. Buisson</i>	28, 169
of wave-length, international system, in arc spectrum of iron, Secondary. <i>H. Kayser</i> , <i>Ch. Fabry</i> , and <i>J. S. Ames</i>	32, 215; 33, 85
of third order of wave-lengths on international system. <i>H. Kayser</i>	32, 217

STANDARDS (*Continued*)

- with plane grating, Testing and selection of tertiary. *Charles E. St. John* and *L. W. Ware* 36, 14; 39, 5
- of light, Primary. *Herbert E. Ives* 36, 322
- of wave-length, international system, in arc spectrum of iron adopted by Solar Union, 1913. *H. Kayser*, *J. S. Ames*, *H. Buisson*, and *F. Paschen* 39, 93
- of wave-length, Elimination of pole-effect from source for secondary. *Charles E. St. John* and *Harold D. Babcock* 46, 138

STAR or STARS. See also STELLAR, STELLAR SPECTRA, RADIAL VELOCITIES, SPECTROSCOPIC BINARIES, BINARIES, MAGNITUDES, NOVAE, PARALLAX, PROPER MOTION.

- colors, Photographic determination of, and their relation to spectral type. *J. A. Parkhurst* and *F. C. Jordan* 27, 169
- in globular cluster M 13 (Hercules). *E. E. Barnard* 29, 72
- Study in physiological optics. *Louis Bell* 31, 234
- Note on Bell's paper on. *R. T. A. Innes* 32, 321
- Spectra and colors of red. *J. A. Parkhurst* 35, 125
- Color of the Faint. *Frederick H. Seares* 39, 361
- in cluster M 13 (Hercules), Photographic determination of. *E. E. Barnard* 40, 173
- in cluster N.G.C. 1647, Effective wave-lengths of 184 stars. *E. Hertzsprung* 42, 92
- Effective wave-lengths of absolutely faint stars. *E. Hertzsprung* 42, 111
- Ursa Major, New members of system of. *Ejnar Hertzsprung* (Errata, 30, 320) 30, 135
- Measurement of light of, with selenium photometer. *Joel Stebbins* 32, 185
- temperature of 109, Remarks on Wilsing and Scheiner's memoir on. *J. Wilsing* 32, 130
- Temperatures of. *C. G. Abbot* 32, 319
- J. Wilsing* 33, 85
- velocities for groups of stars of different types of spectra, On the internal and cloud. *H. A. Weersma* 34, 325
- angular diameters of, New method of determining by means of elliptically polarized light. *S. Pokrowsky* 36, 156
- Simplest form of stellar interferometer for determining. *S. Pokrowsky* 41, 147
- Helium, with large parallax, radial velocity (and proper motion?). *J. Voûte* 48, 144
- Conditions in interior of. *A. S. Eddington* 48, 205
- with disappearing bright lines [B.D. 47°3985 in Lacerta]. *Edwin B. Frost* 49, 61

INDEX OF SUBJECTS

99

VOLUME
AND PAGE

STARK-DOPPLER effect for hydrogen canal rays in air. <i>Gordon S. Fulcher</i>	35, 101
STARK effect and atomic structure. <i>Gordon S. Fulcher</i>	41, 359
effect for metals, Method of investigating, with results for chromium. <i>J. A. Anderson</i>	46, 104
effect for metals. <i>T. Takamine</i>	50, 23
STARLIGHT considered with relation to galaxy, Absorption of. <i>George C. Comstock</i>	31, 270
On "earth light," or brightness of midnight sky, exclusive of. <i>W. J. Humphreys</i>	35, 273
Brightness of sky at night and total amount of. <i>P. J. Van Rhijn</i>	50, 356
STARLIT sky, Intrinsic brightness of. <i>Charles Fabry</i>	31, 394
STELLAR SPECTRUM.	
type, Photographic determination of star colors and their relation to. <i>J. A. Parkhurst and F. C. Jordan</i>	27, 169
Classification of stars in order of their evolution. <i>J. C. Kapteyn</i>	31, 258
stars of the fourth, as compared with that of stars of other types. Average parallax of. <i>J. C. Kapteyn</i>	32, 91
<i>H. E. Laÿ</i>	45, 348
of brighter stars, Quantitative method for determining. <i>Sebastian Albrecht</i>	33, 130
classification of, Correspondence concerning	33, 260
internal and cloud velocities for groups of stars of different. <i>H. A. Weersma</i>	34, 325
subdivisions and magnitudes of stars within Class B, Apparent dependence of radial velocities and proper motions upon. <i>C. D. Perrine</i>	41, 315, 395
Spectral distribution of stars of large radial velocity. <i>C. D. Perrine</i>	41, 401
Densities of second-type stars. <i>Harlow Shapley</i>	42, 271
spectral classes and their relation to solar motion, Residual radial velocities of stars of different. <i>C. D. Perrine</i>	42, 305
Variations in type of twenty Cepheid variables. <i>Harlow Shapley</i>	44, 273
spectral class and magnitude-velocity, Relation to proper motion of preferential motion and of progressions of. <i>C. D. Perrine</i> (Errata, 48, 204)	46, 266
Changes of wave-lengths of certain lines depending upon. <i>J. Voûte</i>	47, 137
brighter galactic helium stars, Parallaxes and motion of. <i>J. C. Kapteyn</i>	47, 104, 146 255

STELLAR SPECTRUM (*Continued*)type (*continued*)

spectral differences, On cause underlying. <i>C. D. Perrine</i>	47, 289
Changes of wave-length with change of. <i>F. E. Baxandall</i>	48, 59
Class B, Excess of outward motion of stars of. <i>C. D. Perrine</i>	48, 145
and absolute magnitude of stars, Use of grating for determining. <i>Bertil Lindblad</i>	49, 289
Progressive changes of wave-lengths with change of. <i>Sebastian Albrecht</i>	50, 277
Stars having peculiar. <i>Edward C. Pickering</i>	27, 80
of Sirius, Procyon, and Arcturus, with high dispersion. <i>Walter S. Adams</i>	33, 64
of Nova Lacertae 1910. <i>Edwin B. Frost</i>	33, 410
and color of red stars. <i>J. A. Parkhurst</i>	35, 125
Nova Geminorum No. 2. <i>R. H. Curtiss</i>	35, 233
<i>W. S. Adams and A. Kohlschütter</i>	36, 293
P Cygni. <i>Edwin B. Frost</i>	35, 286
Reversal of calcium lines H and K in. <i>G. Eberhard and K. Schwarzschild</i>	38, 292
of stars having large and small proper motions, Relative intensity at different wave-lengths of. <i>Walter S. Adams</i>	39, 89
and color index with distance and absolute brightness, Change of. Present state of the question. <i>J. C. Kapteyn</i>	40, 187
10 Lacertae, wave-length of λ 4686 and other lines in. <i>Edwin B. Frost and Frances Lowater</i>	40, 268
of four temporary stars. <i>Walter S. Adams and F. G. Pease</i>	40, 294
Criteria for determination of absolute stellar magnitudes. <i>Walter S. Adams and Arnold Kohlschütter</i>	40, 385
Effective wave-lengths of absolutely faint stars. <i>E. Hertzsprung</i>	42, 111
continuous spectrum of stars and its relation to absolute magnitude, Intensity of. <i>George S. Monk</i>	44, 45
of Wolf-Rayet star Gamma Argus, Changes in. <i>C. D. Perrine</i>	47, 52
of Nova Aquilae No. 3, Change in brightness, temperature, and. <i>Mentore Maggini</i> (Errata, 50, 311)	48, 303
Star with disappearing bright lines [B.D. 47°3985 in Lacerta]. <i>Edwin B. Frost</i>	49, 61
STELLAR disks with application to orbit of Algol, Intermediate degrees of darkening at limb of. <i>Harlow Shapley</i>	40, 219
evolution. <i>William Duncan MacMillan</i>	48, 35
luminosities, Critical magnitude in sequence of. <i>Harlow Shapley</i>	49, 96

INDEX OF SUBJECTS

101

VOLUME
AND PAGE

STELLAR (*Continued*)

- motions to absolute magnitude, Relationship of. *Walter S. Adams and Gustaf Strömberg* 45, 293
 - motions, Cause of distance-velocity equation in. *C. D. Perrine* 47, 179; 48, 295
 - photographs, Device for avoiding systematic error depending on magnitude in measurement of. *J. C. Kapteyn* 41, 77
- STIMULUS and exposure-time on retinal threshold, Effect of size of. *Prentice Reeves* 47, 141
- STREAM-MOTION from radial velocities and absolute magnitudes of stars of late spectral types, Determination of solar motion and. *Gustaf Strömberg* 47, 7
- STRONTIUM. Series in spectra. *F. A. Saunders* 32, 153
 - Magnetic separation of spectral lines of. *B. E. Moore* 33, 385
 - Variation with temperature of electric furnace. *Arthur S. King* 48, 13
- STRUCTURE of arc, Observations on. *W. B. Huff* 28, 59
 - atomic, and Stark effect. *Gordon S. Fulcher* 41, 359
 - of third cyanogen band and associated tails. *H. S. Uhler and R. A. Patterson* 42, 434
 - of lithium line λ 6708 and its probable occurrence in sun-spot spectra. *Arthur S. King* 44, 169
 - of band series, Mathematical. *Raymond T. Birge* 46, 85
 - of mercury line λ 2536. *Lucy Wilson* 46, 340
- STUDIES in sensitometry. *Robert James Wallace* 26, 299; 27, 84; 29, 146
 - based on colors and magnitudes in stellar clusters. See Author
 - Index under Shapley
- Sulphur dioxide, Absorption spectrum of. *Frances Lowater* 31, 311
- SUN. See also SOLAR, CHROMOSPHERE, CORONA, ECLIPSE, PROMINENCE.
- SUN, Anomalous dispersion in, in light of observations. *Charles E. St. John* 41, 28
 - Anomalous dispersion in. *Sebastian Albrecht* 41, 333; 44, 1
 - Anomalous dispersion, Mutual repulsion of spectral lines and other solar effects concerned with. *Sir Joseph Larmor* 44, 265
 - Constitution of. *J. F. Hermann Schulz* 29, 33
 - Distribution of eruptive prominences on. *Philip Fox* 28, 253
 - Doppler's principle, in connection with study of radial velocities on. *A. Cotton* 33, 375
 - form and dimensions of, Possible changes in. *F. R. Moulton* 29, 257
 - gases as cause of apparently sharp solar boundary, Diffusing action of. *C. G. Abbot* 50, 295
 - magnetic field of, Preliminary results of an attempt to detect general. *George E. Hale* 38, 27

SUN (*Continued*)magnetic field (*continued*)

Displacement-curve of. <i>Frederick H. Seares</i>	38, 99
Apparent variation of field-strength with level in solar atmosphere. <i>G. E. Hale, F. H. Seares, A. van Maanen, and F. Ellerman</i>	47, 206
moon and planets, Stellar magnitudes of. <i>Henry Norris Russell</i>	43, 103
observations, at Haverford. <i>Walter M. Mitchell</i>	30, 75
Observations of, on May 18 and 19, 1910. <i>Frederick Slocum</i>	32, 24
rotation of, determined from motions of hydrogen flocculi. <i>George E. Hale</i>	27, 219
determined from motion of dark calcium flocculi. <i>Philip Fox</i>	28, 117
determined from motion of faculae on disk. <i>Stanislas Chevalier</i>	32, 388
determined by spectrograph. <i>Walter S. Adams</i>	26, 203
determined from displacements of hydrogen lines. <i>Walter S. Adams</i>	27, 213
during year 1908. <i>Walter S. Adams</i>	29, 110
during year 1911. <i>J. S. Plaskett and Ralph E. DeLury</i>	37, 73
spectroscopic determination of, at Ottawa. <i>J. S. Plaskett</i>	42, 373
effect of haze on. <i>Ralph E. DeLury</i>	44, 177
<i>C. G. Abbot</i>	45, 65
at times of eclipse, Desirability of determining. <i>Ralph E. DeLury</i>	47, 199
variation in. <i>H. H. Plaskett</i>	43, 145; 45, 144
in 1915, Nature of supposed variation. <i>Ralph E. DeLury</i>	44, 198; 48, 195
Spectrum of, Absence of long waves from. <i>E. F. Nichols</i>	26, 46
Wave-length of H δ and H ϵ in. <i>J. Evershed</i>	28, 162
Photography of "flash," without an eclipse. <i>George E. Hale and Walter S. Adams</i>	30, 222
limb, Investigation of displacement of spectrum lines at. <i>Walter S. Adams</i>	31, 30
energy-spectrum and temperature of sun. <i>C. G. Abbot</i>	34, 197
obtained at 1905 eclipse, Wave-lengths of chromosphere from. <i>S. A. Mitchell</i>	38, 407
Distribution of elements in solar atmosphere as given by flash. <i>Charles E. St. John</i>	40, 356
The flash, without an eclipse; Region λ 4800- λ 6600. <i>Walter S. Adams and Cora G. Burwell</i>	41, 116

SUN (*Continued*)spectrum of (*continued*)

Accuracy obtainable in measured separation of close lines
in systematic errors in Rowland table for such lines.

Charles E. St. John and *L. W. Ware* 44, 15

Baxandall's explanation of an "abnormal." *George E. Hale* 46, 291

from 6800 Å to 9600 Å, Photography of. *W. F. Meggers* 47, 1

temperature of, Determination of. *Glenn A. Shook* 39, 277

and radiation of. *Felix Biscoe (Biske)* 43, 197; 46, 355

C. G. Abbot, F. E. Fowle, and L. B. Aldrich 44, 39

SUN-SPOTS, Variability in light of Mira Ceti and temperature of.

A. L. Cortie 26, 123

spectrum, Weakened and obliterated lines in. *G. Nagaraja* 26, 143

Preliminary catalogue of lines affected in. Region λ 4000 to
 λ 4500. *Walter S. Adams* 27, 45

bands which appear in spectrum of calcium arc burning in pres-
ence of hydrogen. *Charles M. Olmsted* 27, 66

Solar vortices. *George Hale* 28, 100

Carl Störmer (Errata, 44, 263) 43, 347

Probable existence of magnetic field in. *George E. Hale* 28, 315

spectra, Separation in magnetic field of some lines occurring as
doublets and triplets in. *Arthur S. King* 29, 76

spectra, Magnetic separation of absorption lines in connection
with. *P. Zeeman* and *B. Winawer* 32, 329

Magnetic polarity of. *George E. Hale, Ferdinand Ellerman,*
S. B. Nicholson, and A. H. Joy (Errata, 50, 77) 49, 153

Possible existence of steam in regions of. *A. L. Cortie* 28, 379

Interaction of. *Philip Fox* and *Giorgio Abetti* 29, 40

Water-vapor in. *Walter M. Mitchell* 30, 44

spectra, Summary of results of study of Mount Wilson photo-
graphs of. *Walter S. Adams* 30, 86

of September 25, 1909. *Frederick Slocum* 31, 26

and other special regions, Motion and condition of calcium
vapor over. *Charles E. St. John* 34, 57, 131

Attraction of, for prominences. *Frederick Slocum* 36, 265

Radial motion in. *Charles E. St. John* 37, 322; 38, 341; 40, 158

W. H. Julius 40, 1

J. Evershed 40, 156

cycle, Determination of periodicities by harmonic analyzer
with an application to. *A. A. Michelson* 38, 268

numbers, Photographic periodogram of. *A. E. Douglass* 40, 326

spectra, Structure of lithium line λ 6708 and its probable occur-
rence in. *Arthur S. King* 44, 169

	VOLUME AND PAGE
SURFACE, Telescopic vision of an illuminated. <i>Fred W. Vorhies</i> .	40, 311
SURFACES, optical, Correction of. <i>F. Twyman</i>	48, 256
SYSTEM, periodic, Arc and spark spectra and. <i>Ingo W. D. Hackh</i> .	48, 241
SYSTEMATIC error, Device for avoiding, depending on magnitude. <i>J. C. Kapteyn</i>	41, 77
TANTALUM, Melting point of. <i>William E. Forsythe</i>	34, 353
Distribution of energy in spectrum of. <i>George Vest McCauley</i>	37, 164
Relation between black-body and true temperatures for. <i>C. E. Mendenhall and W. E. Forsythe</i>	37, 380
63 TAURI, Radial velocity of. <i>K. Schwarzschild</i>	38, 295
TAURUS STREAM, Variable radial velocities of four stars in. <i>Oliver J. Lee</i>	29, 240
Variable radial velocities of two stars in. <i>Storrs B. Barrett</i> .	32, 183
TELESCOPE of Mount Wilson Solar Observatory, Tower. <i>George E. Hale</i>	27, 204
objectives, Improvement of Foucault knife-edge test in investi- gation of. <i>J. Hartmann</i>	27, 254
Zonal errors in magnification of reflecting. <i>Arthur C. Lunn</i> .	27, 280
Mercury paraboloid as reflecting. <i>R. W. Wood</i>	29, 164
of Mount Wilson Solar Observatory, Methods and results in direct photography with 60-inch reflecting. <i>G. W. Ritchey</i>	32, 26
Stellar spectrograph of 72-inch reflecting. <i>J. S. Plaskett</i> .	49, 209
TELESCOPIC vision of an illuminated surface. <i>Fred W. Vorhies</i> .	40, 311
TELLURIUM vapor and effect of high temperature upon it, Absorp- tion spectrum of. <i>E. J. Evans</i>	36, 228
TEMPERATURE control for silvered specula. <i>Heber D. Curtis</i> .	26, 256
Sensitiveness of photographic plates at different. <i>Robert James Wallace</i>	28, 39
gradients of atmosphere, Vertical, especially in region of upper inversion. <i>W. J. Humphreys</i>	29, 14
Solar disturbances and terrestrial. <i>W. J. Humphreys</i>	32, 97
of 109 stars, Remarks on Wilsing and Scheiner's memoir on. <i>J. Wilsing</i>	32, 130
measurements, Emissive power of wedge-shaped cavities and their use in. <i>C. E. Mendenhall</i>	33, 91
on ionization of a gas, Effect of. <i>J. Harry Clo</i>	33, 115
Absorption spectrum of selenium vapor and effect of. <i>E. J. Evans and G. N. Antonoff</i>	34, 277
for tungsten, tantalum, molybdenum, and carbon, and tempera- ture variation of their reflecting power, Relation between black-body and true. <i>C. E. Mendenhall and W. E. Forsythe</i>	37, 380
of electric furnace spectrum of titanium, Variation with. <i>Arthur S. King</i>	39, 139

TEMPERATURE (*Continued*)

- of electric furnace spectra of cobalt and nickel, Variation with.
Arthur S. King 42, 344
- of space, Remarks on. *Ch. Fabry* 45, 269
- spectrum, and brightness, Change in, of Nova Aquilae No. 3.
Mentore Maggini (Errata, 50, 311) 48, 303
- "TERRESTRIAL" radiation, Note on. *Frank W. Very* 43, 171
- TEST, Phenomena observed in Foucault. *Sudhansukumar Banerji*
 (Errata, 50, 311) 48, 50
- THERMO-ELECTRIC measurements for photographic photometry.
Harlan True Stetson 43, 253, 325
- THIELE'S "phase" in band spectra. *H. S. Uhler* 42, 72
- THORIUM, Measurement of wave-lengths of arc spectrum of.
Frank Lawrence Cooper (Errata, 30, 400) 29, 329
- Separation of spectral lines of, in magnetic field. *B. E. Moore* 30, 144, 178
- TIDES in pipes on a rigid earth. Theory of. *F. R. Moulton* 50, 346
- TITANIUM. Arc spectrum of, from λ 5866 to λ 7364. *E. J. Evans* 29, 160
- Wave-lengths of $\lambda\lambda$ 3900 and 3913 in arc and spark. *Norton A.*
Kent and Alfred H. Avery 27, 70
- Redetermination of wave-lengths of arc and spark lines of.
Clinton Maury Kilby 30, 243
- Electric furnace for spectroscopic investigations, with results
 for spectrum of. *Arthur S. King* 28, 300
- in electric furnace spectra, Occurrence of enhanced lines of.
Arthur S. King 37, 119
- Variation with temperature of electric furnace spectrum of.
Arthur S. King 39, 139
- Influence of magnetic field upon spark spectra of iron and.
 Summary of results. *Arthur S. King* 34, 225
- under moderate pressures, Investigation of spectra of iron and.
Henry G. Gale and Walter S. Adams 35, 10
- Zeeman effect for. *Arthur S. King* 30, 1
- Correspondence between Zeeman effect and pressure displace-
 ment for spectrum of. *Arthur S. King* 31, 433
- oxide, Production in electric furnace of banded spectra ascribed
 to. *Arthur S. King* 43, 341
- TRANSPARENCY, Avogadro's constant and atmospheric. *F. E. Fowle* 40, 435
- TUBE-ARC, Relation of arc and spark lines by means of. *Arthur S.*
King 38, 315
- spectrum of iron and comparison with dissymmetries in spark
 spectra. *Arthur S. King* 41, 373
- TUBE-RESISTANCE furnace, Origin of radiation in. *Arthur S. King* 49, 48
- 004872 V TUCANAE, Period of. *Bernhard H. Dawson* (Errata 50, 311) 48, 310

	VOLUME AND PAGE
TUNGSTEN, Relation between black-body and true temperatures for.	
<i>C. E. Mendenhall and W. E. Forsythe</i>	37, 380
Melting point of. <i>William E. Forsythe</i>	34, 353
for short wave-lengths, Emissive power of. <i>E. O. Hulburt</i> .	45, 149
at glowing temperatures, Deviation from Lambert's cosine	
law of emission from. <i>A. G. Worthing</i>	36, 345
TYPE. See under STELLAR SPECTRUM.	
ULTRA-VIOLET. See also under SPECTRUM.	
photography, Nickel deposits on glass mirrors for. <i>R. W.</i>	
<i>Wood</i>	42, 365
UNIVERSE, stellar, Spiral of obscuration in. A reply to Mr. F. H.	
Seares. <i>H. H. Turner</i>	46, 226
Comments on Professor Turner's reply. <i>F. H. Seares</i>	46, 232
Arrangement of sidereal. <i>Harlow Shapley</i>	49, 311
URSAE MAJORIS, New members of system of stars β , γ , δ , ϵ , ζ .	
<i>Ejnar Hertzsprung</i> (Errata, 30, 320)	30, 135
W URSAE MAJORIS, W Delphini and W Crucis, Elements of eclipsing	
variables. <i>Henry Norris Russell</i>	36, 133
Color-curve and light-elements of. <i>Harlow Shapley and J.</i>	
<i>Van der Bilt</i>	46, 281
VACUA, Further study of metallic spectra produced in high. <i>Edna</i>	
<i>Carter and Arthur S. King</i>	49, 224
VACUUM tube discharge in magnetic field. <i>Norton A. Kent and</i>	
<i>Royal M. Frye</i>	37, 183
tube phenomena, Relation of light of very short wave-length to	
some. <i>Theodore Lyman</i>	28, 52
VANADIUM, Band spectrum of. <i>H. Koenen</i>	26, 129
Electric furnace for spectroscopic investigations, with results	
for spectrum of. <i>Arthur S. King</i>	28, 300
Arc spectrum of, in region λ 5800 to λ 7364. <i>H. Shaw</i>	30, 127
Redetermination of wave-lengths of arc and spark lines of.	
<i>Clinton Maury Kilby</i>	30, 243
Effect of pressure on arc spectrum of. <i>R. Rossi</i>	34, 21
Zeeman effect for. <i>Harold D. Babcock</i>	34, 209
Variation with temperature of electric furnace spectrum of.	
<i>Arthur S. King</i>	41, 86
VAPOR, Polarized fluorescence of metallic, and solar corona. <i>R. W.</i>	
<i>Wood</i>	28, 75
Ultra-violet absorption spectra of metallic. <i>R. W. Wood and</i>	
<i>D. V. Guthrie</i>	29, 211
-density on calcium lines K, H, and g, Effect of variations of.	
<i>Oliver J. Lee</i>	34, 397
Spectroscopic determination of aqueous. <i>F. E. Fowle</i>	35, 149

VAPOR (*Continued*)

above Mount Wilson, Determination of aqueous. <i>F. E. Fowle</i>	37, 359
Spectra of magnesium, calcium, and sodium. <i>James Barnes</i>	39, 370
lamps, and observations of their spectra in Schumann region. <i>Frederick A. Saunders</i>	40, 377
Transparency of aqueous. <i>F. E. Fowle</i>	42, 394
Study with electric furnace of anomalous dispersion of metallic. <i>Arthur S. King</i>	45, 254
VARIABLE STARS, Fifteen new. <i>Edward C. Pickering</i>	27, 80
Suggestions for explaining certain phenomena of. <i>F. R. Moulton</i>	29, 257
On the long-period. <i>C. Luplau Janssen</i>	38, 200
Cepheid variable S Arae. <i>Alexander W. Roberts</i>	33, 197
Explanation of short-period variability. <i>F. H. Loud</i>	26, 369
Light curve of δ Cephei. <i>Joel Stebbins</i>	27, 188
in center of Messier 3, New. <i>Harlow Shapley</i>	40, 443
Nature and cause of. <i>Harlow Shapley</i>	40, 448
Some orbital characteristics of Cepheid-Geminid variables and suggested explanation of cause of their light- variations. <i>C. D. Perrine</i>	41, 307; 50, 81
Light-curve of XX Cygni. <i>Harlow Shapley and Martha Betz Shapley</i>	42, 148
RR Lyrae, Changes in spectrum, period, and light curve of. <i>Harlow Shapley</i>	43, 217
Period of U Cephei. <i>Martha Betz Shapley</i>	44, 51
Variations in spectral type of twenty. <i>Harlow Shapley</i>	44, 273
SU Cassiopeiae, Note on. <i>Walter S. Adams and Harlow Shapley</i>	47, 46
RS Boötis, Variation in light and color of. <i>Frederick H. Seares and Harlow Shapley</i>	48, 214
Distances and luminosities of 139. <i>Harlow Shapley</i>	48, 279
Three notes on. <i>Harlow Shapley</i>	49, 24
Residual radial velocities of, and their bearing on a pulsa- tion theory. <i>C. D. Perrine</i>	50, 148
of short period, Color-changes of certain. <i>F. C. Jordan</i>	50, 174
eclipsing, β Aurigae. <i>Joel Stebbins</i> (Errata, 34, 415)	34, 112
TW Andromedae, Elements of. <i>John Q. Stewart</i>	42, 315
SS Camelopardalis. <i>R. J. McDiarmid</i>	45, 50
S Cancr, Elements of. <i>Harlow Shapley</i>	36, 269
TV, TW, TX Cassiopeiae. <i>R. J. McDiarmid</i> (Errata, 44, 263)	42, 412
RZ Cassiopeiae, Photometric study of. <i>R. S. Dugan</i>	44, 117
RZ Cassiopeiae, Binary. <i>John Stein</i>	29, 308

VARIABLE STARS (*Continued*)eclipsing (*continued*)

SU Cassiopeiae, Photographic light-curve of. <i>J. A. Parkhurst</i>	28, 278
U Cephei, Elements of. <i>Harlow Shapley</i>	36, 269
W Crucis, Elements of. <i>Henry Norris Russell</i>	36, 133
SW Cygni, Elements of. <i>Harlow Shapley</i>	36, 269
W Delphini, Elements of. <i>Henry Norris Russell</i>	36, 133
W Delphini, Elements of. <i>Harlow Shapley</i>	36, 269
RR Draconis. <i>Frederick H. Seares</i>	36, 368; 37, 204
SX Draconis, Elements of. <i>W. Van B. Roberts</i>	42, 312
Z Draconis, Elements of. <i>Henry Norris Russell</i>	39, 405
TU Herculis, Elements of. <i>John Q. Stewart</i>	42, 315
T Leonis Minoris, Elements of. <i>R. J. McDiarmid</i> (Errata, 44, 263)	42, 412
RV Ophiuchi, Photometric study of. <i>Raymond S. Dugan</i>	43, 130
δ Orionis. <i>Joel Stebbins</i>	42, 133
RT Persei, Elements of. <i>Henry Norris Russell</i>	39, 405
V Tucanae, Period of 004872. <i>Bernhard H. Dawson</i> (Errata, 50, 311)	48, 310
W Ursae Majoris, Elements of. <i>Henry Norris Russell</i>	36, 133
W Ursae Majoris, Color-curve and light elements of. <i>Harlow Shapley</i> and <i>J. Van der Bilt</i>	46, 281
RR Vulpeculae and evidence of darkening toward the limb. <i>Mentore Maggini</i>	50, 141
RS Vulpeculae, Elements of. <i>John Q. Stewart</i>	42, 315
Discovery of. <i>Joel Stebbins</i>	34, 105
Determination of orbital elements of. <i>Henry Norris Russell</i>	35, 315; 36, 54
Darkening at limb in. <i>Henry Norris Russell</i> and <i>Harlow Shapley</i>	36, 239, 385
Distribution of, in space. <i>Henry Norris Russell</i> and <i>Harlow Shapley</i>	40, 417
Miscellaneous notes on. <i>Harlow Shapley</i>	41, 291
Note on Mr. Shapley's studies of periods of. <i>Sven D. Wicksell</i>	43, 245
Comparison of visual and photographic observations of. <i>H. N. Russell, Mary Fowler, and Martha C. Borton</i>	45, 306

VELOCITIES. See RADIAL VELOCITIES.

VELOCITY, distance-, equation in stellar motions, Cause of. *C. D.**Perrine* 47, 179; 48, 295

magnitude-, Relation to proper motion of, preferential motion

and of progressions of spectral class and. *C. D. Perrine*

(Errata, 48, 204) 46, 266

κ VELORUM. Orbit of spectroscopic binary. <i>Heber D. Curtis</i>	26, 271
VENUS as a luminous ring. <i>Henry Norris Russell and Zaccheus Daniel</i>	26, 69
η VIRGINIS, Spectroscopic binary. <i>Naozo Ichinohe</i>	26, 282
W. E. Harper	27, 160
VISIBILITY of radiation. <i>Edward P. Hyde, W. E. Forsythe, and F. E. Cady</i>	48, 65
VISION of an illuminated surface, Telescopic. <i>Fred W. Vorhies</i>	40, 311
VOGEL, Hermann Carl. <i>Edwin B. Frost</i>	26, 130; 27, 1
VON GOTHARD, EUGENE. <i>Baron Béla Harkányi</i>	31, 1
VORTICES, Solar. <i>George E. Hale</i>	28, 100
Researches on solar. <i>Carl Störmer</i> (Errata, 44, 263)	43, 347
RR VULPECULAE, Eclipsing binary, and evidence of darkening toward limb. <i>Mentore Maggini</i>	50, 141
RS VULPECULAE, Elements of eclipsing variable. <i>John Q. Stewart</i>	42, 315
WATER-VAPOR in sun-spots. <i>Walter M. Mitchell</i>	30, 44
Absorption of near infra-red radiation by. <i>W. W. Sleator</i> (Errata, 48, 204)	48, 125
WAVE-LENGTH, Absorption of some gases for light of very short. <i>Theodore Lyman</i>	27, 87
Relation of light of very short, to some vacuum tube phenomena. <i>Theodore Lyman</i>	28, 52
Reproduction of prismatic spectrum photographs on a uniform scale of. <i>A. Fowler and A. Eagle</i>	28, 284
with objective-prisms, Determination of absolute. <i>Edward C. Pickering</i>	31, 372
of transmission of red pyrometer glasses and other notes on pyrometry. <i>Edward P. Hyde, F. E. Cady, and W. E. Forsythe</i>	42, 294
in spectral series and radii of their respective atoms, as computed from Einstein's photo-electric equation and by other methods, Relation between convergence. <i>Fernando Sanford</i>	44, 201
Emissive power of tungsten for short. <i>E. O. Hulburt</i>	45, 149
Variation with time of characteristics of potassium photo-electric cell as to sensibility according to. <i>Herbert E. Ives</i>	46, 241
to vacuum, Reduction of, and dispersion of air. <i>Raymond T. Birge</i>	50, 72
of lines in stellar spectra with change of type, Progressive changes of. <i>Sebastian Albrecht</i>	50, 277
international standard, Determination of, for establishment of a standard system. <i>Paul Exersheim</i>	26, 172
Measurements for establishment of a system of spectroscopic standards. <i>C. Fabry and H. Buisson</i>	28, 169

WAVE-LENGTH (*Continued*)International standard (*continued*)

Secondary standards of, Elimination of pole-effect from source for. <i>Charles E. St. John</i> and <i>Harold D. Babcock</i>	46, 138
of standard iron lines, Redetermination. <i>A. H. Pfund</i>	28, 197
Measurements of iron lines. <i>P. Eversheim</i>	31, 76
in arc spectrum of iron, Secondary standards of. <i>H. Kayser</i> , <i>Ch. Fabry</i> , and <i>J. S. Ames</i>	32, 215
Standards of third order of. <i>H. Kayser</i>	32, 217
in arc spectrum of iron. <i>F. Goos</i>	
I. From λ 4282 to λ 5324	35, 221
II. From λ 5328 to λ 6495	37, 48
(III.) Establishment of normal system	38, 141
arc spectrum of iron adopted by Solar Union, 1913, Secondary standards of. <i>H. Kayser</i> , <i>J. S. Ames</i> , <i>H. Buisson</i> , and <i>F. Paschen</i>	39, 93
(international system), Determination of, for arc and spark spectrum of mercury. <i>Harold Stiles</i>	30, 48
WOLF, MAX, and JOHANN PALISA, Invitation for subscriptions to photographic charts by. <i>Johann Palisa</i>	28, 86
WOLF-RAYET star Gamma Argus, Changes in spectrum of. <i>C. D. Perrine</i>	47, 52
stars and planetary nebulae, Relation between the. <i>W. H. Wright</i>	40, 466
YERKES Actinometry. <i>J. A. Parkhurst</i>	36, 169
Observatory, Investigation of forty-inch objective of. <i>Philip Fox</i>	27, 237
refractor, Photographic determinations of stellar parallax with. <i>Frank Schlesinger</i>	32, 372; 33, 8, 161, 234, 353, 418; 34, 26
Stellar parallaxes from photographs made with. <i>Frederick Slocum</i> and <i>S. A. Mitchell</i>	38, 1
YOUNG, CHARLES AUGUSTUS. <i>Edwin B. Frost</i>	30, 323
YTTRIUM, Magnetic separation of lines of. <i>B. E. Moore</i>	28, 1
On the spectrum of. <i>Emil Paulson</i>	41, 72
ZEEMAN EFFECT. See also MAGNETIC FIELD.	
barium. <i>B. E. Moore</i>	28, 1
calcium. <i>B. E. Moore</i>	33, 385
chromium. <i>Harold D. Babcock</i>	33, 217
<i>J. E. Purvis</i>	34, 312
iron, and titanium. Correspondence between Zeeman effect and pressure displacement for. <i>Arthur S. King</i>	31, 433
iodine, Complex lines of. <i>R. W. Wood</i> and <i>M. Kimura</i>	46, 197

ZEEMAN EFFECT (*Continued*)

iron, chromium, and titanium. Correspondence between Zeeman effect and pressure displacement for. <i>Arthur S. King</i>	31, 433
lithium, Five lines of, and their magnetic separation. <i>Norton A. Kent</i>	40, 337
osmium. <i>B. E. Moore</i>	28, 1
strontium. <i>B. E. Moore</i>	33, 385
thorium. <i>B. E. Moore</i>	30, 144, 178
titanium. <i>Arthur S. King</i>	30, 1
chromium, and iron. Correspondence between Zeeman effect and pressure displacement for. <i>Arthur S. King</i>	31, 433
vanadium. <i>Harold D. Babcock</i>	34, 209
yttrium. <i>B. E. Moore</i>	28, 1
zirconium. <i>B. E. Moore</i>	28, 1
Separation in magnetic field of some lines occurring as doublets and triplets in sun-spot spectra. <i>Arthur S. King</i>	29, 76
On measurement of. <i>A. Cotton</i>	35, 213
<i>G. F. C. Searle</i>	37, 282
Experimental study of theory of complex. <i>A. E. Becker</i>	44, 236
ZINC, Band spectrum of. <i>Emily E. Howson</i>	36, 286
spectrum at low pressures. Pressure-shift of lines of. <i>V. F. Swain</i>	40, 137
sulphide, Effect of red and infra-red on decay of phosphorescence in. <i>Herbert E. Ives</i> and <i>M. Luckiesh</i>	34, 173
ZIRCONIUM, Magnetic separation of lines of. <i>B. E. Moore</i>	28, 1
